PENGAJIAN KEJURUTERAAN AWAM

UNIVERSITI TEKNOLOGI MARA CAWANGAN PULAU PINANG

Message from Ketua Pusat Pengajian

Assalamualaikum Warahmatullahi Wabarakatuh and greetings,

It is a pleasure to welcome you to the 2025 edition of Buletin FKA. This bulletin brings together the activities, achievements and memorable moments of the School of Civil Engineering, UiTM Cawangan Pulau Pinang throughout the year.

Looking back, 2025 has been a meaningful year for our School. While the achievements recorded in this bulletin deserve recognition, I believe our true strength lies in the people behind them. Every programme, student activity, research initiative and community engagement reflects the time and effort contributed by our lecturers, administrative staff, technical staff and students.

As educators, our responsibility extends beyond delivering academic content. We must prepare our students to think carefully, act professionally and respond confidently to the challenges they will encounter as civil engineers. The engineering profession continues to change, and our students must be ready to work with new technologies while remaining attentive to public safety, environmental concerns and the needs of society.

I am particularly grateful for the cooperation shown by everyone throughout the year. Some contributions are clearly visible through awards, publications and successful programmes, while many others take place quietly behind the scenes. Both are equally important to the continued success of our School.

To our students, I encourage you to make full use of every opportunity available during your time at UiTM. Academic knowledge provides the foundation, but your willingness to learn, communicate and take responsibility will shape the kind of engineer you eventually become.

I would also like to thank our alumni, industry partners and collaborators for continuing to share their knowledge and experience with us. Their involvement helps ensure that our teaching and activities remain relevant to professional practice.

Finally, congratulations to the editorial team and everyone who contributed to this edition. I hope Buletin FKA 2025 will serve as a meaningful record of our shared journey and remind us of what we can accomplish when everyone contributes.

Thank you and Wassalam.

Enhancing Visibility of Master's Programmes at FOI 2025 Pulau Pinang

Noorsuhada Md Nor & Siti Hafizan Hassan

The Festival of Ideas (FOI) 2025 Pulau Pinang, held on 24–25 October 2025 at the Penang Waterfront Convention Centre (PWCC), is a key initiative to position Penang as a centre for fresh ideas, strategic thinking, and global innovation. The involvement of Associate Professor Dr Noorsuhada Md Nor and Dr Siti Hafizan Hassan as programme leaders reflects a strategic effort to promote and introduce their academic programmes to a wider audience. This initiative goes beyond a simple visit; it adopts a *serampang dua mata* approach to promote two key programmes: the Master of Science in Forensic Infrastructure Engineering (EC708) and the Master in Construction Management (EC707). The participation of Associate Professor Ts Dr Kay Dora Abd Ghani, Dr Norhusna Mohamad Nor, Dr Muhamad Faizal Pakir Mohamed Latiff, and others further strengthens this effort, acting as a catalyst to enhance programme visibility. The initiative is also supported by lecturers from other faculties, who contribute by promoting their own programmes. Through this platform, the programmes are not only showcased but also aligned with current trends in innovation and knowledge exchange, enhancing their visibility and relevance within both academic and industry communities.
