ACKNOWLEDGEMENT

First of all, I have a great pleasure in submitting my industrial training report to fulfil the requirement of Ministry of Higher Education in order for me to complete my Diploma course study.

I would like to express my highest gratitude to Almighty God, the source of knowledge, understanding and wisdom. His guidance and blessing provides strength in me to perform all my responsibilities as a trainee and completing any tasks given. Without His will I would not be able to finish this industrial training report within the stipulated time.

My grateful thanks go to Malaysian Agricultural Research and Development Institute (MARDI) for giving me the opportunity to undergo an industrial training session in this agency for 14 weeks period. I also would like to express my deep sense of gratitude to supervisor, Mr Gregory Lipong and all the staff. A great contribution, hard work and valuable guidance is mostly appreciated.

Not forget, great appreciation go to the Faculty of Plantation and Agrotechnology, Universiti Teknologi MARA Sarawak, Kampus Mukah. This special thanks goes to my helpful lecturer, Mr Muhamad Syukrie bin Abu Talip for his valuable guidance, inspiration, suggestion and encouragement. With high gratitude, I was appreciating all the supports that he gave truly help me throughout the training period.

And finally, it would be wrong if I forget to mention those who had a big contribution that help me from time to time during this industrial training. Thanks to my family and friends that gave me strength either in the form of physical or emotional strength. They were the reason for the completion of my internship.

Chapter 1

INTRODUCTION TO INDUSTRIAL TRAINING

1.0 Introduction

Industrial training is compulsory for every student on higher education institutions. Every student must be involved in industrial training for requested period in order to get pass with diploma certificate.

The industrial training usually carried out at either government or non-government agency within country. It is takes one whole semester. This is important because industrial training will train the trainees to face real working condition. Thus, it would produce new graduates with high capability either in academic or non-academic.

Besides, industrial training is about an exposure. This enables student to learn on the real situation in some profession. As student comes out from their comfort zone, they will definitely develop their social skills inside.

1.1 Industrial Training Objectives

1.1.1 To expose the students to the real working condition.

Students will be able to expand their knowledge and experiences through all the activities that they participated. During industrial training period, students also can learn about how real working life is. Thus, it would enable them to do any task easier and efficiently in the future. Students also being exposed with new information which are not included in theory in class lesson.

1.1.2 To develop job experiences among students.

Students will be able to gather any experience that can be useful in the future. Activities during the training period can be guidance for students to face a real li

fe profession. Furthermore, they can apply their past experiences to solve the problems in the future. This industrial training would produce fast thinker graduates that have a capability to give a quick solution in order to solve any upcoming problem.

1.1.3 To promote better understanding and knowledge in specific field.

Students will be able to strengthen their understanding and beliefs during training. This is because theories that have been learned in class can be applied on the real situation. Not all the theories provide real understanding but when it comes into field it can be understood. By showing demonstration, it will become knowledge for that individual. Also not all information is provided in books or class but extra information can be gained through practical session.

1.1.4 To develop social and communication skills among graduates.

During industrial training, students can develop their social and communication skills with another. All the tasks given will require them to cooperate with other staff or officers. In this training, students will be able to associate with others so this is the right moment for them to develop their social skills. Team work spirit also can be gained. As the result, at the end of training period they will become a person who can adapt with different environment together with new people and culture.

1.1.5 To produce trustworthy and discipline.

During industrial training, students will be given with some tasks that need to be completed with a sense of trustworthy. More important, students must learn to be honest during completion of their task. Apart from that, discipline is another important element in real life profession. Discipline is about punctuality, action, dress code and so on. During training, students need to follow the rules or regulation of the organisation.
