ACKNOWLEDGEMENT

First of all, I want to acknowledge and thanks to God with my deepest gratitude because without Him, I cannot do and complete my industrial training and this full practical report on time. This Industrial training report would not carry successfully without the cooperation from the executive staff and mandore who contribute in preparing and completing this report.

I also want to express my sense of thankful and deep appreciation especially to Faculty of Plantation and Agrotechnology of UiTM Sarawak for giving me the opportunity to undergo the internship program for my final year in studying Diploma in Planting Industry Management. Plus, it also gives me the opportunity to gain and raise the confidence level in order to overcome the real working situation.

Special thanks toSyarikat Ladang Dafa Sdn Bhd for helping me with the information about the oil palm industry. Special thanks to estate assistant manager, Mr.Napolean Bin Abdullah for sharing the information in oil palm industry which really help in my report, and also all the staff that are very friendly.

And last but not least, I would like to thank to every individual that helped either directly or indirectly in preparing this proposal project especially all the staff at the Dafa Estate for sharing the information about how the management in oil palm industry. I am very grateful to have an experienced all the hardships and valuable memories towards a successful internship program's report.

INTRODUCTION OF INDUSTRIAL TRAINING

Industrial training is a medium where the students will be introduced to the real situation in the plantations. Besides it is to give exposure and experience to the students about the real situation in the fields. Hence, this is an early preparation and exposure for students before they start working at any company in future. Industrial training is a prerequisite to the award of Diploma students In Planting Industry Management, UniversitiTeknologi Mara. For sessions from March until June 2018, I was doing my industrial training for three months, starting from 5th MARCH 2018 until 8th JUNE 2018.

THE IMPORTANCE OF INDUSTRY TRAINING

Industrial training is one of the branches of which will provide an opportunity for each students to practice all what has been learned in class. Through this industrial training student will be able to differentiate between theories and actual work in the field, whether it is same or not.

In addition, industrial training also help student to reduce nervousness and awkward feeling when students face a real working situation. During industrial training, students will gain experience in resolving a problem and be a coming of age for our self. Indirectly, it will provide awareness to each student that the situation at work is actually not as easy as like what they have learned in theory and practical.

On the other hand, industrial training also can facilitate students to apply jobs after graduation. These things could not be doubt because employment firms generally very well stressed people with high knowledge as well as having work experience.

However, each of the knowledge obtained during industrial training is enormous and will be used whilst in the working environment. Students can use the experience and skills acquired during the industrial training as guide and supplies on the job later because learning isn't the same as learning theories while taking industrial training. In addition, difficulties have been encountered during the period of this training will be an effective way and a catalyst for students to improve the performance at a high level and make sure the students become dedicated workers in doing something jobs.

OBJECTIVES OF INDUSTRIAL TRAINING

The other objectives of industrial training are to:

1. Industrial training is aimed to reveal student with actual work environment and increase their knowledge and experience.
2. As training and application for learning the theories taught while on a campus.
3. Be able to foster honesty and responsibility in each student and able to cooperate with other staff.
4. Strengthen confidence in each of the student upon completion of industrial training.
5. Learn how to have a close relationship with senior officials such as managers, assistant managers and other employees while taking industrial training.
