Universiti technology MARA.

ACKNOWLEDGMENT

I would like to express my attitude to all those who gave me the possibility to complete this thesis. My special thanks goes to the postgraduate department of Faculty of Art and Design and Universiti Teknologi Mara for giving me permission to commence this thesis in the first instance, to do the necessary research work using departmental data and all resources.

I am deeply indebted to my supervisor Assoc Prof. Alias Yussof for his guidance, suggestion, motivation and encouragement throughout this research. All of the effort and guidance has been very helpful and I very honoured to have him as supervisor. My sincere gratitude goes to Puan Hema Zulaika Hashim for assist me on project report writing.

My appreciation also goes to all my colleagues from Design Technology Department and those who have supported me from the beginning. Finally, I would like to express my very special thanks to my beloved family for their full support which has actually given me the strength to complete this design report in fulfilment of master degree.

Abstract

This study aims to develop a household product designed and inspired from the origami characteristics. It also aim to identify the characteristic of the folding technique inspired by the origami based on the material chosen , that is stainless steel. It also needs to relate the product's design with the space saving criteria needed in a house.

The data was gathered from the methods that were selected in order to conduct this study. A comparative study has been made between two main areas of design, the origami design and the product design. Using the primary and secondary data, this study was designed to investigate the product's design, application or function, material and the folding technique that was inspired by the origami.

Based on the results of this research, it can be concluded that origami inspired designs can educate the consumer through the creativity of the design.
