ABSTRACT

This research has been made of study on parking management system at Public University. This study focus on the parking problem has occurred in the each university. The issue of this problem had happened in the university, parties must take action to overcome this problem. Only three case of studies will be carried out of the research which is University of Malaya (UM), University of Putra Malaysia (UPM) and University of Teknologi MARA (UiTM). All the case studies will be use to get the information about the parking management system.

The research also have a three objective to complete it. The purpose and objectives of the study are to identify parking management system at public university and to identify the user level of satisfaction and problems that is related to parking management system at public university. Lastly is to give a recommendation to the problem.

This research, data collection will be collect based on the qualitative and quantitative data. Qualitative data have two category are primary data and secondary data. The primary data have include the interview and observation. Thus, secondary data have books, journal, articles and internet. Then, quantitative data have questionnaire, pilot study, sample population and survey instrument. This research also use pilot study to gather of data collection. Questionnaires will also be distributed at random to get the information about level of satisfaction and problem that are related to a parking management system in the university. Besides that, the author will suggest how to overcome on parking problem of the each university.

From the study, will evaluate the better off parking management system between third public university. In this case, facilities management needs also to get the information about the parking management system in university. Facilities management usually all have a data about the parking management system at every university.
