Programme : Master in Tourism Management
Faculty : Fakulti Pengurusan Hotel & Pelancongan
Thesis Title : Destination Attractiveness of a Theme Park: Legoland Theme Park Malaysia.

Signature of Candidate : .................................................
Date : June 2013
ABSTRACT

Tourism in Malaysia has evolved significantly, from providing nature and heritage tourism-related activities to the creation of fun and leisure related experience to cater the needs of specific market. Consequently, building theme park as one of tourism product to stimulate tourist’ fun and leisure demand were undertaken by developed countries especially emerging markets like Thailand, Indonesia, Singapore, including Malaysia. This study aimed to examine the effect of destination attributes towards visitors’ satisfaction as well as the visitors’ behavioural intentions by referring to Legoland Theme Park in Malaysia context. By using quantitative approach, the experiences of 384 visitors of Legoland were discovered. Descriptive statistic, correlation and multiple regression analysis were run to analyze the data, using Statistical Program for Social Analysis (SPSS) version 20. Through the analyses, some useful insights or predictors on the issues of visitors’ interest were obtained. Most importantly, the findings reveal that entertainment attributes contributes to high satisfaction level of the Legoland Malaysia visitors as well as the intentions to revisit and recommend in the future. However, the result of this study might not fit to be applied to other theme park related research, due to limitation of the contextual setting. The findings provide appropriate responses which believed to be important for the related authorities in continuously promoting theme park as tourism product, thus to be considered as a pioneering effort in producing research papers particularly related to theme park development in Malaysia.

Keywords—Destination attributes, theme park, satisfaction, behavioral intention, tourism product
ACKNOWLEDGEMENT

First and foremost, I would like to thank Allah Subhana Taala for giving me good health and ideas in order to accomplish this Master thesis. I especially want to thank my research advisor, Mr Mohd Raziff Jamaluddin, for generously providing guidance on the technical aspect of this paper, for continuously encouraging me and pushing me to my limits to complete my thesis this semester, and for all the patience and support you gave me since the first day of my thesis completion.

Besides my advisor, I would like to extend my appreciation to Mr Zulhan Othman, Assoc. Professor Zafrul Hj. Isa and Mdm Roslina Ahmad, my panel members during the oral defense of this paper, I am very much grateful for the knowledge your have imparted for the improvement of this work. Your insights and comments are very much appreciated.

I would like to extend my appreciation to Legoland Malaysia for the assistance in supplying the relevant information during my process completing this thesis. My sincere appreciation likewise extends to all my colleagues and friends who have provided assistance in various ways. Their view and tips are useful indeed. Last but not least, I would like to express my gratitude to my beloved precious family members who have supported me financially and giving me moral support to accomplish this thesis.
