UNIVERSITI TEKNOLOGI MARA

GROWTH INHIBITION OF LEGUME COVER CROP, 
*Mucuna bracteata*, BY PACLOBUTRAZOL

IDA NERINA BINTI MD YUSUF

Final year project report submitted in a partial fulfilment of the requirements for degree of Bachelor of Science (Hons.) Plantation Technology and Management

Faculty of Plantation and Agrotechnology

JANUARY 2015
DECLARATION

This final year project is a partial fulfilment of the requirement for a degree of Bachelor of Science (Hons.) Technology and Plantation Management, Faculty of Plantation and Agrotechnology, Universiti Teknologi MARA.

It is entirely my own work and has not been submitted to any other University or higher education institutions, or for any other academic award in this University. Where use has been made of the work of other people it has been fully acknowledged and fully referenced.

I hereby assign all and every right in the copyright to the Universiti Teknologi MARA ("UiTM"), which henceforth shall be the owner of the copyright in this work and that, any reproduction or use in any form or by any means whatsoever is prohibited without a written consent of UiTM.

Candidate’s signature: .............................. Date:..............................
Name: .................................................................
IDA NERINA BINTI MDYUSUF

I hereby declare that I have checked the project and in my opinion, this project is adequate in terms of scope and quality for award of the degree of Bachelor of Science (Hons.) Technology and Plantation Management, Faculty of Plantation and Agrotechnology, Universiti Teknologi MARA.

Signature: .................................................................
Name of Supervisor: .......................... DR. TSAN FUI YING
Position: .................................................................
Senior Lecturer
Date: .................................................................
CANDIDATE'S DECLARATION

I declare that the work in this Final Year Project was carried out in accordance with the regulations of Universiti Teknologi MARA. It is original and is the result of my own work, unless otherwise indicated or acknowledged as referenced work. The final year project has not been submitted to any other academic institution or non academic institution for any other degree or qualification.

In the event that my Final Year Project is found to violate the conditions mentioned above, I voluntarily waive the right of conferment of my bachelor degree and agree to be subjected to the disciplinary rules and regulations of Universiti Teknologi MARA.

Name of candidate : IDA NERINA BINTI MD YUSUF

Candidate’s ID No : 2012836448

Programme : Bachelor of Science (Hons.) Plantation and Technology

Management

Faculty : Plantation and Agrotechnology

Title : Growth Inhibition Of Legume Cover Crop, Mucuna Bracteata, By Paclobutrazol

ABSTRACT

The growth of legume cover crops (LCC) in field needs to be controlled as its excessive growth can affect the yield of main crop. Growth inhibition of *Mucuna bracteata* was studied following the application of plant growth regulator (PGR). The objectives of this study were to investigate the growth response of *M. bracteata* towards different concentrations of paclobutrazol (PBZ) and identify the optimum rate of PBZ for maintenance of this cover crop in field. Parameters investigated were the internode length, internode (stem) diameter, leaf size (area), relative chlorophyll content and number of branches at first fully developed leaf. All parameters were obtained weekly for a period of two months. The results show a positive outcome where PBZ successfully inhibited the growth of *M. bracteata* by reducing the size of leaves, the length of their internodes but this procedure increased the diameter of vines, the compactness of plant by emergence of more new shoots at nodes and increased the chlorophyll content in the leaves.
