UNIVERSITI TEKNOLOGI MARA

MODELING OF FLOOD WATER LEVEL PREDICTION USING NNARX

FAZLINA AHMAT RUSLAN

Thesis submitted in fulfilment of the requirements for the degree of Doctor of Philosophy

Faculty of Electrical Engineering

September 2015
CONFIRMATION BY PANEL OF EXAMINERS

I certify that a panel of examiners has met on 17 March 2015 to conduct the final examination of Fazlina bt Ahmat Ruslan on her Doctor of Philosophy thesis entitled “Modeling of Flood Water Level Prediction Using NNARX” in accordance with Universiti Teknologi MARA Act 1976 (Akta 173). The Panel of Examiners recommends that the student be awarded the relevant degree. The panel of Examiners was as follows:

Zaiki Awang, PhD
Professor
Faculty of Electrical Engineering
Universiti Teknologi MARA
(Chairman)

Widhyakorn Asdornwised, PhD
Assistant Professor
Department of Electrical Engineering
University of Chulalongkorn, Thailand
(External Examiner)

Hafizah Husain, PhD
Associate Professor
Faculty of Electrical, Electronic & System
Universiti Kebangsaan Malaysia
(External Examiner)

Nooritawati Md Tahir, PhD
Associate Professor
Faculty of Electrical Engineering
Universiti Teknologi MARA
(Internal Examiner)

SITI HALIJJA SHARIFF, PhD
Associate Professor
Dean
Institute of Graduate Studies
Universiti Teknologi MARA
Date: 1 September 2015
AUTHORS’S DECLARATION

I declare that the work in this thesis was carried out in accordance with the regulations of Universiti Teknologi MARA. It is original and is the results of my own work, unless otherwise indicated or acknowledged as referenced work. This thesis has not been submitted to any other academic institution or non-academic institution for any degree or qualification.

I, hereby, acknowledge that I have been supplied with the Academic Rules and Regulations for Post Graduate, Universiti Teknologi MARA, regulating the conduct of my study and research.

Name of Student : Fazlina Ahmat Ruslan
Student I.D. No. : 2010626304
Programme : EE990
Faculty : Electrical Engineering
Thesis Title : Modeling of Flood Water Level Prediction Using NNARX
Signature of Student : 
Date : September 2015
ABSTRACT

There were a total of 58 events of natural disaster in Malaysia for the period between years 1980 to 2010 that claiming a total of 1,239 lives of the 640,000 people affected. These data were based on statistics provided by United Nation Officer for Disaster Risk Reduction (UNISDR). From all different categories of natural disasters considered, flood accounted for over half the registered events. Floods contribute to 8 out of 10 disaster events with the highest human exposure and affect over 85% of all the disaster-stricken people. Floods are thus the primary hazard which affecting Malaysia, in particular the west coast of Peninsular. Therefore, an accurate and reliable flood prediction model is very much needed to provide early warning for residents nearby flood locations for evacuation purposes. However, current trends in flood prediction only involve flood modeling because no prediction time was mentioned and discussed. Furthermore, in Malaysia there is none of flood model or flood prediction model developed yet. An existing system in the Department of Irrigation and Drainage Malaysia is only the alarming system which alarms the users only when the water level exceeds the danger limit. Based on these scenarios, the research objective is to obtain a flood water level prediction model for Kuala Lumpur flood prone area using a new develops modeling technique that based on Neural Network Autoregressive Model with Exogenous Input (NNARX). The samples used for model training, model validation and model testing were carefully selected. In order to obtain good flood water level prediction model, all samples must be the data when flood events happened. All samples were real-time data that were obtained from the Department of Irrigation and Drainage Malaysia upon special request. From carefully selected samples, several optimal flood prediction times were suggested for flood location in Kuala Lumpur. Model validation and model testing were conducted to observe the prediction performances. The optimal prediction time was selected based on the results of prediction performances. A new modeling technique was develop and implemented to improve the prediction performance of NNARX model. The prediction performance of the new develop method was compared with Elman Neural Network (ENN), Radial Basis Function Neural Network (RBFNN) and Multilayer Perceptron Neural Network (MLPNN). In order to justify that the new develop method is applicable to other locations, selected flood prone locations in Kedah and Terengganu were considered. Results from the new develop method show significant improvement to prediction performance as compared to NNARX model.
ACKNOWLEDGEMENT

In the name of Allah, the Most Gracious and the Most Merciful.

Alhamdulillah, all praises to Allah for the strengths and His blessing in completing this thesis. First and foremost I would like to express my sincere gratitude to my supervisor, Associate Prof Dr Ramli Adnan for his guidance and support throughout my study and especially for his confidence in me. His invaluable help of constructive comments and suggestions throughout the research and thesis works have contributed to the success of this research. Not forgotten, I would like to thank my co-supervisors, Associate Prof Sr. Dr Abd Manan Samad and Associate Prof Dr Zainazlan Md Zain for their encouragement and insightful comments towards completion of my thesis. I express my heartfelt gratefulness to my supervisors for their guide and support that I believed I learned from the best.

I would like to express my appreciation to the Department of Irrigation and Drainage Malaysia (JPS) for providing me with the real-time data used in my research works. My acknowledgement also goes to JPbSM UiTM and to the Scholarship Division, Ministry of Education Malaysia for given me the opportunity and scholarship to pursue my PHD studies. My appreciation also goes to Dean, Faculty of Electrical Engineering, UiTM for his continuous support and to all the technicians and office staffs of Faculty of Electrical Engineering, UiTM for their co-operations.

Last but not least, my deepest gratitude goes to my beloved parents, Haji Ahmat Ruslan Mohd Ariffin and Hajjah Latifah Hanum Mohd Yusuf for their endless love, prayers and encouragement. My sisters and brothers deserve my wholehearted thanks as well. To those who indirectly contributed in this research, your kindness means a lot to me. Thank you very much.

This thesis is only a beginning of my journey.
