UNIVERSITI TEKNOLOGI MARA

A MODEL FOR RELATIONSHIP BETWEEN CHARACTERISTICS AND CHALLENGES IN IMPLEMENTING GREEN HIGHWAY

FATIN NAJWA BINTI MOHD NUSA

Thesis submitted in fulfillment of the requirements for the degree of Master of Science

Malaysia Institute of Transport

August 2016
AUTHOR'S DECLARATION

I declare that the work in this thesis/dissertation was carried out in accordance with the regulations of Universiti Teknologi MARA. It is original and is the results of my own work, unless otherwise indicated or acknowledged as referenced work. This thesis has not been submitted to any other academic institution or non-academic institution for any degree or qualification.

I, hereby, acknowledge that I have been supplied with the Academic Rules and Regulations for Post Graduate, Universiti Teknologi MARA, regulating the conduct of my study and research.

Name of Student : Fatin Najwa Binti Mohd Nusa
Student I.D. No. : 2013888176
Programme : Master of Science (Logistics and Transport) – LT780
Faculty : Malaysia Institute of Transport (MITRANS)
Thesis/Dissertation : A Model for Relationship between Characteristics and Challenges in Implementing Green Highway
Signature of Student : ...............................................................
Date : August 2016
ABSTRACT

Green highway is different from conventional highway due to the differences of its concept, fundamental, characteristics, and technologies. Stakeholders in highway projects have to overcome various challenges towards the successful implementation of green highway. Although Malaysian Highway Authority (MHA) has been introducing guideline for green highway, the implementation of green highway in Malaysia is still far behind because of the challenges in setting forth the guideline. This study comprises four objectives: (1) to investigate the main challenges of green highway implementation in Malaysia; (2) to determine the main characteristics of green highway in the Malaysian context; (3) to identify the main success factors of green highway implementation in Malaysia; and finally (4) to develop a model for the relationship between characteristics and challenges towards the success of green highway in the Malaysia context. This study was based on a triangulation research approach where a series of unstructured interview and questionnaire survey were conducted among stakeholders in highway construction industry. The data was analysed with content analysis and descriptive analysis using Nvivo 9.2 (QSR International) and Statistical Package for Social Science (SPSS) software respectively. The data was also analysed with Criticality Index assessment during the development of the model using Structural Equation Modelling-Partial Least Squares (SEM-PLS). A total of 12 unstructured interviews were conducted and a total of 63 usable postal questionnaires were received in order to establish the relationship. The study identifies that (1) legal and regulatory; technical and physical; financial and cultural are challenges to implement green highway in the Malaysia context; (2) planning, design, construction; operation and maintenance stage are characteristics to implement green highway in the Malaysia context; (3) innovation; construction activities; material and resources are success factors to implement green highway and proposes (4) a model that shows relationship between characteristics and challenges of green highway has significant and positive effect in implementing green highway. The key constructs for green highway implementation is the characteristics of green highway. For the future research, this study can be extended to look into lack of social aspects in green highway characteristics if it is compared to the Malaysia Green Highway Index (MyGHI) manual.

## CHAPTER ONE: INTRODUCTION

1. Research Background
   1.1 Government Initiatives towards Green Highway
   1.2 Problems Statement
   1.3 Research Questions
   1.4 Research Aim and Objectives
   1.5 Scope of the Study
   1.6 Structure of the Thesis

## CHAPTER TWO: LITERATURE REVIEW

2. Introduction
2.2 Definition of Green Highway
2.3 Challenges of Green Highway Implementation
   2.3.1 Assessment in Green Highway
   2.3.2 Financial Resources
   2.3.3 Legal and Regulatory
   2.3.4 Awareness and Knowledge
   2.3.5 Technical and Physical
2.4 Characteristics of Green Highway
CHAPTER THREE: RESEARCH METHODOLOGY 39

3.1 Introduction 39

3.2 Research Strategy and Design 40

3.3 Choice of Methods and Methodologies 41

3.4 Model Item Development 43
   3.4.1 Specification of Construct Domain 43
   3.4.2 Item Generation from Exploratory Study 44
   3.4.3 Item Testing 45

3.5 Literature Review 45
   3.5.1 Source of Literature Review 46

3.6 Unstructured Interview 46
   3.6.1 Population and Sampling Frame 47
   3.6.2 Reasons for Selecting Unstructured Interview 49
   3.6.3 Interview Planning and Scheduling 50
   3.6.4 Conduct of Interviews 50
   3.6.5 Data Analysis for Interviews 51
   3.6.6 Content Analysis 52
   3.6.7 Interviews Derivation of Results 52

3.7 Questionnaires 52
   3.7.1 Population and Sampling Frame 53
   3.7.2 Questionnaire Design 54
   3.7.3 Questionnaire Pilot Test 56
   3.7.4 Data Collection 57
   3.7.5 Statistical Analysis for Questionnaire 57

3.8 Criticality Index Assessment 59

3.9 Model Development Used for Hypotheses Test 60
   3.9.1 Structural Equation Modelling (SEM) 62
   3.9.2 Partial Least Squares (PLS) 63
