ABSTRACT

This study aims to use neural network to develop a model to predict mathematics performance of Universiti Teknologi MARA Kampus Melaka (UiTMKM) students. This model allows the system administrator to train and normalize data as well as trains. Once the model has been established, the system can be used to forecast mathematics achievement of a future UiTMKM student based on his or her academic background and performance in certain subjects in the Sijil Pelajaran Malaysia (SPM) examination. A neural network technique, using Multi Layer Perceptron (MLP) and back propagation algorithm is employed. A total of 391 data samples of diploma students were collected, trained and tested using this model. The input variables consist of SPM results in modern mathematics, additional mathematics, sciences, physics and English as well as several factors like age, gender, school location and subject stream. Analysis of data shows a reasonably strong correlation between the input variables and the targeted output variables, which are mathematics grades obtained at UiTMKM.

TABLE OF CONTENTS

	Page
TITLE	i
RESEARCH APPROVAL LETTER	ii
SUBMISSION OF REPORT	iv
PROJECT TEAM MEMBERS	v
ACKNOWLEDGEMENT	vi
ABSTRACT	vii

CHAPTER ONE : INTRODUCTION

1.1	Introduction	1
1.2	Problem Definition	3
1.3	Purposes and Scopes Of The Study	3
1.4	Research Questions	4

CHAPTER TWO : LITERATURE REVIEW

2.1	Academic Achievement	6
2.2	Prediction Model And Forecasting Model	8
2.3	Artificial Intelligent Approaches In Education Application	10

CHAPTER THREE : NEURAL NETWORK

3.1	The Concept of Neural Network	16
3.2	Neural networks Versus Conventional Computers	19

3.3	The Analogy to the Brain	21
3.3.1	The Biological Neuron	21
3.3.2	The Artificial Neuron	22
3.4	Architecture of Neural Networks	23
3.4.1	Feed-forward Networks	23
3.4.2	Feedback Networks	24
3.4.3	Network Layers	24
3.5	The Learning Process	25
3.6	Multilayer Perceptrons	28

CHAPTER FOUR: METHODOLOGY

4.1	Identifying Attributes	36
4.2	Data Collection Procedures	37
4.3	Pre-Processing Techniques	38
4.4	System Development	39
4.4.1	Database Design	40
4.4.2	Context Diagram	40
4.4.3	Data Flow Diagram	41
4.4.4	Menu Structure	42
4.4.5	Flow Chart	43
4.5	Training Pseudo Code	47
4.5.1	Initialize Weight	47
4.5.2	Feed Forward	48
4.5.3	Backpropagation of Error	49
