ABSTRACT

Local fruit recognition contributes to help people recognize all types of fruits which automatically display the name of the fruits by entering an image. The image will go through an image processing to define its result. Whereby, image processing is used to process an image in order to construe the content of the digital figure. In this project, the image will be entered as an input and the outcome will be prompted as a word displaying the fruit's name. This study has been discussed because a recognition system is one of the big challenges for computer vision which is hard to achieve human level as well. Moreover, image processing for fruits must overcome a variety of difficulties to set up a performed recognition. This study aims to provide a prototype of fruit recognition by using Histogram of Oriented (HOG) technique. For this study, banana and mango are being used for the training and testing which contain 30 images of training and 30 images of testing while implementing the recognition. The points of strength are selected using HOG which is required to do the calculation for defining the distance of every image. Manhattan Distance is the similarity distance that is being used in this project study. The distance will be referred to as the knowledge for each type of fruit. The system has achieved its objectives while the results displayed show that the accuracy for banana is 86% and for mango is 63.6%. Furthermore, this study still can be improved by more study on it. Instead of using one feature in recognizing fruit, maybe the combination of two or more features can yield to better accuracy. The conclusion that can be drawn in this study is fruit recognition will be needed in daily use since there are too many types of fruits in Malaysia nowadays.

TABLE OF CONTENT

CONTENT	PAGE
SUPERVISOR'S APPROVAL	ii
STUDENT DECLARATION	iii
ACKNOWLEDGEMENT	iv
ABSTRACT	v
TABLE OF CONTENT	vi
LIST OF FIGURE	vii
LIST OF TABLE	xi
 CHAPTER ONE: INTRODUCTION	
1.1 Background Study	1
1.2 Problem Statement	2
1.3 Objective	3
1.4 Scope	3
1.5 Significance	3
1.6 Expected Output	4
1.7 Chapter Summary	4
 CHAPTER TWO: LITERATURE REVIEW	
2.1 Image Processing	5
2.1.1 Purpose of Image Processing	6
2.1.2 Step in Image Processing	6
2.2 Overview of Local Fruits	7
2.3 Overview Object Recognition	8
2.3.1 Shape Recognition	8
2.3.2 Colour Recognition	9
2.4 Features Descriptors	13

2.5	Similarity Measures	17
2.5.1	Manhattan Distance	18
2.5.2	Euclidean Distance	19
2.6	Chapter Summary	19

CHAPTER THREE: METHODOLOGY

3.1	Research Framework	20
3.2	Details in Research of Methodology	21
3.2.1	Planning	23
3.2.2	Analyzing	23
3.2.3	Design	24
3.2.4	Development	26
3.2.5	Testing	29
3.3	Requirements	30
3.4	Chapter Summary	31

CHAPTER FOUR: TESTING AND RESULT

4.1	Testing Process	32
4.1.1	Buttons	32
4.2	Result and Discussion	37
4.2.1	Testing Results	40
4.3	Chapter Summary	41

CHAPTER FIVE: CONCLUSIONS AND RECOMMENDATIONS

5.1	Summary of Study	42
5.2	Limitations of the System	43
5.3	Recommendations	43
5.4	Chapter Summary	44
