ABSTRACT

Body measurement is the most important thing that need to be considered in order to find the best fit size clothes. Traditionally, manual taking measurement by tailor has been applied. However, this conventional method requires more time and energy. This method also involved highly cost which may give a huge impact to the garment company. Therefore, a new system should be developed to measure human body based on the data (image) given by the customers. It will help to search and decide the best fit cloth(es) as a result. This research use one of the artificial intelligence techniques, **Fuzzy Expert System**. The type of fuzzy inference applied to the system is **Mamdani with hedges**. The first step applied is by defining the range of body measurement for each clothes size which was determined by the relevant expertise (tailor). Then fuzzy rules and fuzzy sets are determined. Next, coordinate point used for the image before the system gathers the measurement of the body. After that, the measurement will become an input to the knowledge base. The system will then be able to determine the match clothes size. This project was restricted to the Quppy's Garment Sdn Bhd for the shoulder, chest, waist and hip range measurement. This project is significant to the garment industry whereby, in defining clothes sizes using intelligent systems may make process faster and decrease the cost. The system have been tested base on 30 images and 95% of the output generate are consistent.

TABLE OF CONTENTS

CONTENT	PAGE
APPROVAL	ii
DECLARATION	iii
ACKNOWLEDGEMENT	iv
ABSTRACT	v
TABLE OF CONTENT	vi
LIST OF TABLES	ix
LIST OF FIGURES	x

CHAPTER ONE: INTRODUCTION

1.0	Introduction	1
1.1	Background of the Problem	1
1.2	Problem Statement	1
1.3	Objectives of Research Project	2
1.4	Research Project Scopes	2
1.5	Significance of the Research Project	3
1.6	Summary	4

CHAPTER TWO: LITERATURE REVIEW

2.0	Introduction	5
2.1	Artificial Intelligence and Expert System	5
2.2	Fuzzy Expert System	9
2.2.1	Fuzzy Rules	9
2.2.2	Fuzzy Variable, Fuzzy Sets and Fuzzy Value	10
2.2.3	Inference Process	12
2.2.3.1	Mamdani-Style Inference	13
2.2.3.2	Sugeno-Style Inference	14

2.3	Garment Industry	15
2.4	Techniques to compute Body Measurement	15
2.5	The measurement	17
2.6	Summary	18

CHAPTER THREE: METHODOLOGY

3.0	Introduction	19
3.1	Project Overview	20
3.2	Knowledge Comprehension	21
	3.2.1 Fuzzy Expert System Approach	21
	3.2.1.1 Mamdani-Style Inference Engine	22
	3.2.2 Acquiring Problem Domain Knowledge	23
3.3	Knowledge Acquisition	23
	3.3.1 Interview	23
	3.3.2 Image Samples	24
3.4	System Design	25
	3.4.1 Inference Engine	26
	3.4.1.1 Define Variables	26
	3.4.1.2 Determine Fuzzy Sets	27
	3.4.1.3 Construct Fuzzy Rules	28
	3.4.1.4 Encode Fuzzy Sets and Rules	31
	3.4.2 Interface Design	31
	3.4.3 Database Design	31
3.5	System Development	31
3.6	Assessment	34
	3.6.1 Validation	34
	3.6.2 Analysis and Documentation	35
3.7	Software and Hardware Requirement	36
3.8	Summary	36
