ABSTRACT

Rm30Shop Company is an online shop that provides a shopping platform in Malaysia, particularly through Instagram. Rm30Shop activities range of a series of sales, review services, fashion trend which focuses business activity with the customer. Through an observation that has been conducted, it is found out that there is an inefficiency of data management during a buy and sells activities, whereby one of the activities in the shop; data management of customer and taking orders process is still using the manual process. The current way of doing the data management of orders, product, customers in the shop is through log book, in which the log book reduce the effectiveness and efficiency of the shop and sometimes it might be unorganized and may results in information mixed-up. Additionally, the shop encountered a challenge to enhance the medium to advertise their product to the world. They currently make sell using Instagram which is the only resource to use for advertising. The motivation that drives to the construction of this project is to develop a Hybrid mobile application that will handle the data management aspect besides providing the ability to produce cross platform apps using a single set of work which makes the shop has a wider resource as a medium to advertise and overall enhanced their profit. Moreover, it has been found out during the interview conducted that there is no system has yet to be developed to assist the process. The first objective of the project is to gather and analyze the requirement of Online Shopping with Management System for Rm30Shop. Second objective is to design the application for Rm30Shop. The final objective of this project to develop the application for Rm30Shop. The significance of this project would be to help academicians to analyse the development of Hybrid Mobile Application process in a more orderly manner as such the massive amount of data will be more efficient to be used using an ICT-based tool rather than manually. The methodology used to develop this project is the Modified Waterfall System Development Life Cycle, which contains 3 phases; Requirement Gathering and Analysis, Design, and Implementation phase. One of the deliverables from the phases is the Software Requirements Specifications that will be the basis for producing the design documentation. This work can be further extended in the concept of Human-Computer Interaction (HCI) elements to enhance the user experience and make it more interactive.

TABLE OF CONTENT

CONTENTS	PAGE
SUPERVISOR’S APPROVAL	ii
STUDENT’S DECLARATION	iii
ACKNOWLEDGEMENT	iv
ABSTRACT	v
TABLE OF CONTENT	vi
LIST OF FIGURES	ix
LIST OF TABLES	x
LIST OF ABBREVIATIONS	xi
CHAPTER ONE: INTRODUCTION	1
1.1 Background of Study	1
1.2 Problem Statement	4
1.3 Research Aim	5
1.4 Research Objectives	5
1.5 Research Scope	5
1.6 Research Significance	6
1.6.1 Academician	6
1.6.2 Stakeholder	6
1.7 Research expected Outcome	6
CHAPTER TWO: LITERATURE REVIEW	7
2.1 Introduction	7
2.2 Overview of Shopping	10
2.3 Overview of Traditional System of Rm30Shop	11
2.4 Overview of Online Shopping with Management System	12
2.4.1 Customer Relationship Management (CRM)	13
2.4.2 Review Online Shopping System	14

2.4.3	Type of payment in Online Shopping	15
2.5	Application Development	15
2.5.1	Framework of Application Development	16
2.5.2	Hybrid mobile application Comparison Web Application	19
2.5.3	Hybrid mobile application Framework comparison to Native Application Framework	20
2.5.4	Mobile Application System Development	22
2.5.5	Hybrid mobile application Development Architecture	24
2.5.6	Choices of Language	25
2.6	Overview of the Database Used for the Project	27
2.7	Related Work	29
2.8	Review of software development lifecycle	32
2.8.1	Waterfall Model Lifecycle Methodology	34
2.8.2	Mobile Application Development Lifecycle	34
2.9	Chapter Summary	35
 CHAPTER THREE: METHODOLOGY		 36
3.1	Modified Waterfall Model Software Development Life Cycle	36
3.1.1	Requirements Gathering Analysis Phase	38
3.1.2	Design Phase	40
3.2	Implementation Phase	40
3.2.1	Hybrid mobile application Implementation	42
3.3	Hardware and Software Requirements for the Project	43
3.4	Project Timeline	44
3.5	Chapter Summary	44
 CHAPTER FOUR: ANALYSIS AND RESULT		 46
4.1	Gather and analyzed requirements	46
4.1.1	A Knowledge Comprehension of Application Development	46
4.1.2	Understanding Existing System	47
4.1.3	Interview Session with Stakeholder	48
4.1.4	Construction of Software Requirement Specification (SRS)	51
4.2	To design Online Shop with management System that focusing in Hybrid Mobile Application Development	68
