IODINE DOPING OF AMORPHOUS CARBON THIN FILMS DEPOSITED USING CAMPHORIC CARBON PRECURSOR

DAYANA BINTI KAMARUZAMAN

Thesis submitted in fulfillment of the requirements for the degree of Master of Science

Faculty of Electrical Engineering

December 2013
AUTHOR'S DECLARATION

I declare that the work in this thesis was carried out in accordance with the regulations of Universiti Teknologi MARA. It is original and is the result of my work, unless otherwise indicated or acknowledged as referenced work. This thesis has not been submitted to any other academic institution or non-academic institution for any degree or qualification.

I, hereby, acknowledge that I have been supplied with the Academic Rules and Regulations for Post Graduate, Universiti Teknologi MARA, regulating the conduct of my study and research.

Name of Student : Dayana Binti Kamaruzaman
Student’s I.D. No. : 2010178251
Programme : Master of Science in Electrical Engineering (EE780)
Faculty : Faculty of Electrical Engineering
Title : Iodine Doping of Amorphous Carbon Thin Films
Deposited using Camphoric Carbon Precursor

Signature of Student : .............................................................
Date : December 2013
Amorphous carbon (a-C) is expected to be an excellent material for fabricating low cost and high efficiency carbon based solar cells because of its interesting properties and feasibility of band gap engineering over a wide range. The preparation of a-C thin films was carried out by using thermal chemical vapor deposition (CVD) technique. The initial phase of this work involved the deposition of a-C thin films using camphor oil as an environmentally carbon precursor. The second phase is focused on the doping process of a-C thin films with iodine (I) as p-type dopant. The studies were done to determine the optimum parameters to obtain a p-type a-C:I thin film. The deposition temperature, deposition time and gas flow rate effects on the properties of a-C thin films were analyzed in details. The a-C thin films deposited at 550°C, 30 min and 35 sccm were considered as the best parameters throughout this work. For doping process, the a-C:I thin films is found to be influenced by doping temperature, amount of iodine and doping time effects. Based on the results, the a-C:I thin film prepared at 400°C, 1.0g and 10 min can be considered as the optimized parameter to produce higher conductivity (≈10^{-3} S/cm) and lower optical band gap. The optimum preparation parameters for a-C and a-C:I thin films have been identified. Comparison between without and with iodine doping on a-C thin film properties have also been studied. Hetero-junction of both films fabricated with n-Si found photovoltaic behavior.
TABLE OF CONTENTS

AUTHOR'S DECLARATION ii
ABSTRACT iii
ACKNOWLEDGEMENTS iv
TABLE OF CONTENTS v
LIST OF TABLES ix
LIST OF FIGURES x

CHAPTER ONE : INTRODUCTION
1.1 Introduction 1
1.2 Research Background 1
1.3 Problem Statements 3
1.4 Research Objectives 4
1.5 Scope of Studies 5
1.6 Contributions of the Research 5
1.7 Thesis Organization 5

CHAPTER TWO : LITERATURE REVIEW
2.1 Introduction 7
2.2 Properties of Carbon 7
    2.2.1 Allotropic Forms of Carbon 7
    2.2.2 Bonding in Carbon 9
    2.2.3 Electronic Structure 16
2.3 Amorphous Carbon : An Overview 17
2.3.1 Electrical Properties 20
2.3.2 Optical Properties 22
2.3.3 Structural Properties 24
2.4 Applications of Amorphous Carbon 25

CHAPTER THREE : METHODOLOGY
3.1 Introduction 27
3.2 Preparation of a-C and a-C:I Thin Films 27
  3.2.1 Thermal Chemical Vapor Deposition (CVD) 27
  3.2.2 Substrate Preparation 32
  3.2.3 Carbon Precursor 33
  3.2.4 Deposition of a-C and a-C:I Thin Films by Thermal CVD Method 34
3.3 The Parameter Variations 36
3.4 Sample Characterization 39
  3.4.1 Current-Voltage Measurement 39
  3.4.2 UV-Vis-NIR Spectroscopy 40
  3.4.3 Raman Spectroscopy 41
  3.4.4 FTIR Spectroscopy 43
  3.4.5 FESEM/EDX 44

CHAPTER FOUR : DEPOSITION OF AMORPHOUS CARBON THIN FILMS USING CAMPHOR OIL PRECURSOR
4.1 Introduction 45
4.2 The Effect of Deposition Temperature 46
  4.2.1 Structural Properties 46
  4.2.2 Optical Properties 49
  4.2.3 Electrical Properties 51
4.3 The Effect of Deposition Time 54
