ABSTRACT

The objective of this project is to examine or to study the effect of various loading rates applied to a High Density Polyethylene (HDPE). Two types of tests have been conducted.

For the Quasi-static test, the experiment states a method for determining the opening mode plane strain fracture toughness (\( K_I \)) and the critical crack tip opening displacement (CTOD) fracture toughness. The method uses the fatigue precracked specimens. These are tested in controlled monotonic loading at a constant rate in stress intensity factor within the range 0.5 MPa.m\(^{0.5}\) during the initial elastic deformation. The machine used for the testing is 'Instrons Model 4260 Screwdriver' testing machine. The testing apparatus is called a 'three point bend test'. In addition, the specimen’s Young modulus (\( E \)) and Poisson’s Ratio (\( v \)) must be calculated by conducting a tensile test. The specimen used for the tensile test is HDPE dog bone tensile specimen.

In High rate speed loading test, we want to determine \( K_{IC} \), the critical stress intensity factor and energy release rate at various impact velocities on HDPE (high density polyethylene) at room temperature. The machine used for the testing is ESH single shot (testing) machine. The speed can reach up to 20 m/s. Theoretically, the HDPE behaves in a brittle manner after the testing.

## CHAPTER I

**INTRODUCTION**

1

## CHAPTER II

**THEORETICAL BACKGROUND**

2.1 The Production Of HDPE From Raw Material And The Process Involved 7

2.2 Background Of Fracture Mechanics 8  
   2.2.1 Fracture Concept 8  
   2.2.2 Linear Elastic Fracture Mechanics 9  
   2.2.3 Elastic Plastic Fracture Mechanics 11
CHAPTER III  

EXPERIMENT PROCEDURES

3.1 Plate And Specimen Preparation 17
  3.1.1 Procedure Of HDPE Plate Production 17
  3.1.2 Preparation Of Tensile And Fracture Toughness Test Specimen 18

3.2 Tensile Test 19
  3.2.1 Purpose 19
  3.2.2 Apparatus 19
  3.2.3 Procedure 22

3.3 Fracture Mechanics Toughness Test - Three Point Bend Test 23
  3.3.1 Scope 23
  3.3.2 Principle 23
  3.3.3 Apparatus 26
  3.3.4 Procedure 29

3.4 Fracture Mechanics Test- High Speed Rate Test 32
  3.4.1 Topic 32
  3.4.2 Purposes 32
  3.4.3 Apparatus 32
  3.4.4 Procedure 35
