MARA UNIVERSITY OF TECHNOLOGY
FACULTY OF MECHANICAL ENGINEERING

FINAL PROJECT REPORT
DIPLOMA IN MECHANICAL ENGINEERING
(EM 199)

A STUDY OF AN ELEVATOR

PREPARED BY:

MOHD. HASRIZAL B. HASSAN
MOHD. SHAHRIL B. MAMAT
ZAKARI B. ISMAIL

ADVISOR:

PROF. MADYA AHMAD KAMIL HUSSAIN
A REPORT SUBMITTED TO THE FACULTY OF MECHANICAL ENGINEERING, UNIVERSITY TECHNOLOGY MARA IN PARTIAL OF FULFILLMENT FOR THE DIPLOMA IN MECHANICAL ENGINEERING

PREPARED BY:

MOHD HASRIZAL HASSAN
UiTM IC. NO : 99082175

MOHD SHAHRIL MAMAT
UiTM IC. NO : 99082248

ZAKARI ISMAIL
UiTM IC. NO : 99082422

APPROVED BY :

PROF. MADYA AHMAD KAMIL HUSSAIN
PROJECT ADVISOR

ACCEPTED BY :

MR. YAACOB B. TAIB
PROJECT COORDINATOR
DIPLOMA IN MECHANICAL

### CHAPTER 1

1.1 Introduction 1  
1.2 History of elevator 1  
1.3 Methodology 2  
1.4 Objective 3

### CHAPTER 2

2.1 Types of elevator  
2.1.1 Traction elevator 4  
2.1.2 Hydraulic elevator 4  
2.2 How an elevator works  
2.2.1 Traction system 5  
2.2.2 Hydraulic system 5  
2.3 Basic lift component  
2.3.1 Traction lift 6  
2.3.2 Hydraulic lift 7  
2.4 Main component  
2.4.1 Geared traction machine 8  
2.4.2 Gearless traction elevator 9  
2.4.3 Car or platform shape 11  
2.4.4 Rail support/ guide rail 12  
2.5 Lift operation  
2.5.1 Power control 12  
2.5.2 Door control 15  
2.5.3 Car switch operation 16  
2.5.4 Automatic operation 16  
2.5.5 Signal operation 17  
2.5.6 Time factor 18

### CHAPTER 3

3.1 Model design 20  
3.2 Construction process  
3.2.1 The component process  
   a) Lift car 21  
   b) Lift car guide rail 22
c) Counterweight 23
d) Counterweight guide rail 24
e) Rope and pulley 25
f) Motor component 26
g) Assembly of lift components 27

CHAPTER 4

4.1 Analysis 28
4.2 Rope test 30

CHAPTER 5

5.1 Discussion 33
5.2 Conclusion 33
5.3 Recommendation 34

APPENDIX

REFERENCE
1.1 INTRODUCTIONS

An elevator or a lift is a machine capable of transporting people or goods to certain elevations, upwards or downwards. There are two common types of elevator; passenger and freight lifts. Both are powered by motor and capable pulley system.

Human, animals or water operated ancient elevators. Early elevators were powered by steam engines, which used hoists system or hydraulic pressure to force the elevator up. Due to safety reason, the lifts were used to carry goods only for fear they might collapse. Modern elevators are reliable and efficient. They are fully automated and can travels to the top floors of skyscraper and high-rise buildings.

Technology elevators have changed our lifestyle and architectural works. Before the elevator, few buildings were greater than four storeys high, with the elevator only the sky is the limit.

In our project, we choose to study an elevator or lift system. In the modern sense an elevator or a lift mode of transportation to lift people or goods vertically. There are two classes of elevator, traction elevator and hydraulic elevator. In our project, we choose traction elevator can be based for high-rise building and can achieve high. The hydraulic elevator is limited for two to six storeys high only.

1.2 HISTORY OF THE ELEVATOR

From ancient times through the Middle Ages, and into the 13th century, man or animal power was the driving force behind hoisting devices. By 1850 steam and hydraulic elevator had been introduced. In 1852, world’s first safety elevator who inverted by Elisha Graves Otis. The first passenger elevator was installed by Otis in New York in 1857. After Otis death in 1861, his sons, Charles and Norton, built on
