DETERMINATION OF POLONIUM 210 IN CIGARETTES USING RADIOCHEMICAL SEPARATION AND ALPHA SPECTROSCOPY

NOOR FAZILA BINTI MUSTAFFA

Final Year Project Report Summitted in Partial Fulfilment of the Requirements for the Degree of Bachelor of Science (Hons.) Applied Chemistry in the Faculty of Applied Sciences Universiti Teknologi MARA

NOVEMBER 2008
This Final Year Project entitled **"Determination of Polonium 210 in Cigarettes Using Radiochemical Separation and Alpha Spectroscopy"** was submitted by Noor Fazila Binti Mustaffa, in partial fulfillment of the requirements for Degree of Bachelor of Science (Hons.) Applied Chemistry, in the Faculty of Applied Science and was approved by

Prof Madya Dr Hj Zaini b. Hamzah
Supervisor
B. Sc. (Hons.) Applied Chemistry
Faculty of Applied Sciences
Universiti Teknologi MARA

Miss Sadihah Bte M. Yahaya
Project Coordinator
B.Sc (Hons.) Applied Chemistry
Faculty of Applied Sciences
Universiti Teknologi MARA

Dr. Yusairie Bin Mohd
Head of Programme
B.Sc (Hons.) Applied Chemistry
Faculty of Applied Sciences
Universiti Teknologi MARA

Date: 11/12/08
ACKNOWLEDGEMENT

In the name of Allah, The Most Gracious and The Most Merciful. Thanks to Allah S.W.T. for giving me the strength and patience to complete this study.

During the completion of this study, there many people who gave me support and supervision. First, I wish to express my sincere gratitude and appreciation to my thesis supervisor, Assoc Prof. Dr. Haji Zaini Bin Hj. Hamzah for taking me as his project student and his invaluable guidance, advice, and encouragement during the discussion period and preparation of this Thesis. I also would like to thank Encik Jalal and staffs of Malaysian Nuclear Agency (NM) for their assistance, guidance and moral support throughout this study.

Thank you also to my classmates who lend the support, assistance and cooperation during the preparation of this thesis. I would also like to thank others who have contributed directly or indirectly in making this report a success.

Above all, my special thanks and appreciation go to both my parents, En. Mustaffa Abd. Ghani and Pn. Shamsiah Binti Yusuf for their financial support, encouragement and patience during have done this thesis.

Noor Fazila Mustaffa

ABSTRACT

MEASUREMENT OF POLONIUM-210 IN CIGARETTES USING RADIOCHEMICAL SEPARATION AND ALPHA SPECTROSCOPY

Seven brands of cigarettes sold in Malaysia were selected from a market in Shah Alam to study Po-210 concentration and dose equivalent to smoker. Effect of Po-210 to lung cancer is an important problem in many countries with very high cigarette consumption. The objective of this thesis is to determine the activity Po-210 in each cigarettes brand, to estimate annual dose inhalation and annual committed effective dose via smoking, and compared with recommended value. In this study, Po-210 was determined by alpha spectrometry using a silicon surface barrier detector after radiochemical procedure and spontaneous deposition of polonium on a silver disk. The polonium content in cigarette smoke was estimated based on its activity in fresh tobaccos, ash, filters before and after smoking and wrapping paper. The annual committed effective doses were calculated basis on 50% of the total smoke is inhaled. The results indicated that Po-210 content in each cigarette brand was from 6.84-13.38 mBq/cigarette and the results of this study are in the range of values measured elsewhere in the world (2.64 to 24.88 mBq/cigarette). Besides, Malaysian smokers who smoke one pack (20 cigarettes) per day, inhaled from 25.05 to 32.85 Bq/year of Po-210. The mean value of the annual committed effective dose for smokers was estimated to be 85.16 μSv. A person who smokes two packs of cigarettes, the annual committed effective dose was 170.32 μSv yr⁻¹ and about 7 times higher than for non-smokers living in the mid-latitudes of the northern hemisphere.
