ABSTRACT

PHYTOCHEMICAL SCREENING AND INSECTICIDAL EFFECT OF *Dendrobium crumenatum* ON *Lasius niger* (BLACK ANT)

The aim of this study is to identify the phytochemical screening and insecticidal effect of *D. crumenatum* on *L. niger*. The two different types of extract stems of *D. crumenatum* were screened for secondary metabolite constituents and insecticidal effect on *L. niger* (black ant). The stem sample were extracts with different solvent, hexane and methanol. The percentage yield of crude extracts calculated found that methanol showed the highest percentage followed with hexane with 10.18% and 4.40% respectively. Phytochemical screening of the extracts revealed the presence of alkaloids, saponins, tannin and terpenoids in the plants investigated. However, flavonoid absence in the hexane extract and methanol extract absence of flavonoid and tannin. The extracts stem of *D. crumenatum* of different concentrations were also investigated for their insecticidal effect on *L. niger*. The concentration was used at 1.875 mg/l, 3.75 mg/l, 75 mg/l, 150 mg/l and 300 mg/l. Average mortality indicated that the extracts caused significant mortality on the target insects. The bioassay has indicated that the toxic effect of the extracts was proportional to the concentration and higher concentration has stronger effect. From the study, hexane extract stem of *D. crumenatum* could cause the highest significant mortality compared to methanol extract. The thin layer chromatography (TLC) analysis is used as confirmation of secondary metabolite found in the extracts stem of *D. crumenatum*. The TLC analysis revealed that hexane extract has the most number of compound present with 15 compounds and methanol extract with 12 compounds respectively. Thus, stem of *D. crumenatum* plant extract could be used as bio-pesticide against *L. niger*.

## CHAPTER 1: INTRODUCTION

1.1 Background Study
1.2 Problem Statement
1.3 Significance of the Study
1.4 Objectives of the Study

## CHAPTER 2: LITERATURE REVIEW

2.1 Botanical Aspect
   2.1.1 Family Orchidaceae
   2.1.2 Genus *Dendrobium*
   2.1.3 General features of *Dendrobium crumenatum*
2.2 *Lasius niger* (Black Ant)
2.3 Phytochemical Aspect
   2.3.1 Alkaloid
   2.3.2 Flavonoid
   2.3.3 Saponin
   2.3.4 Tannin
   2.3.5 Terpenoids
2.4 Insecticidal Studies and Environmental Friendly

## CHAPTER 3: METHODOLOGY

3.1 Materials
   3.1.1 Raw materials
   3.1.2 Chemicals
   3.1.3 Apparatus
3.2 Methods
   3.2.1 Sample collection
   3.2.2 *Lasius niger* sample collection
   3.2.3 Extraction of plant material
   3.2.4 Phytochemical screening test
   3.2.4.1 Alkaloid test
   3.2.4.2 Flavonoid test
   3.2.4.3 Saponin test
3.2.4.4 Tannin test 18
3.2.4.5 Terpenoid test 19
3.2.5 Thin layer chromatography 19
3.2.6 Identification of secondary metabolites using spraying reagent on TLC plate 19
3.2.6.1 Alkaloids 19
3.2.6.2 Terpenoids 20
3.2.7 Bioassay test 20
3.3 Data Analysis 21

CHAPTER 4: RESULTS AND DISCUSSION
4.1 Percentage Yield of Plant Extract Stem Sample 22
4.2 Phytochemical Screening Test 24
4.3 Thin Layer Chromatography (TLC) Analysis 30
4.4 Thin Layer Chromatography (TLC) Analysis Using Spraying Reagent 36
4.5 Response of L. niger (Black Ant) Mortality Toward D. crumenatum Stems Extract 40
4.6 Response of L. niger Mortality Toward D. crumenatum Stems Extract at Different Extraction 42
4.7 Response of L. niger Mortality Toward D. crumenatum Stems Extracts at Different Concentration 44

CHAPTER 5: CONCLUSIONS AND RECOMMENDATIONS 47
