Child tracking is a system that able to secure and monitor the current location of the children by using parent’s smartphone. The system also includes the movement of the children to and from they want to go. In this project, it designs and develop the GPS child tracking with SMS notification solution to help parents trace their children location by using GPS module and GSM module as the main components. The system will track the location of the children and send the notification to the parent smart phones via SMS. In case of emergency, the system provides a button for the children to send alert message to their parent. So that, the parents will get informed about their children situation and make a move to rescue them. The distance that has been covered by this system also bigger than the other technologies such as RFID and Bluetooth. The RFID and Bluetooth covers the indoors tracking such as in shopping complexes because it covers ten to hundred meters only. Besides that, this system sends the accurate location to the receiver, so that it will become easier for parent to find their children. It also can reduce the parents time and parents can monitor the location of their children even though they in the different location.

## CHAPTER 1 : INTRODUCTION

1.1 Background of Study 1
1.2 Problem Statement 2
1.3 Research Objective 3
1.4 Research Scope 4
1.5 Research Significance 4

## CHAPTER 2 : LITERATURE REVIEW

2.1 Child Missing 5
2.2 Previous Child Tracking System 7
   2.2.1 Child Tracking System using RFID Technology 7
   2.2.2 Child Tracking System using Bluetooth Technology 9
2.3 Global Positioning System (GPS) 10
   2.3.1 How GPS Works 10
4.1.2 Short Message Service (SMS) 37
4.2 Software Requirement 37
  4.2.1 Arduino IDE 38
4.3 A Development of GPS Child Tracking with GSM Module 38
  4.3.1 Setting up Arduino UNO 39
  4.3.2 Configuration of Arduino UNO 39
    4.3.2.1 Algorithm for GPS Module and Arduino UNO 39
    4.3.2.2 Algorithm for GSM module and Arduino UNO 41
    4.3.2.3 Algorithm for Push Button and Arduino UNO 43
    4.3.2.4 Output using Serial Monitor 43
    4.3.2.5 Output by Receiving into the Smartphone 44

CHAPTER 5 : RESULT AND ANALYSIS

5.1 Experimentation 45
  5.1.1 Child Tracking Scenario 46
    5.1.1.1 Scenario 1: Monitor the location of the child by using GPS module, GSM module and push button. 46
    5.1.1.2 Scenario 2: The location is keeping updated in the serial monitor. 47
  5.1.2 The accuracy between GPS Module and GPS Smartphone 48
  5.1.3 The difference distance between RFID, Bluetooth and GPS 49
  5.1.4 The response time between Maxis, Celcom, UMobile to send message to the receiver. 50

CHAPTER 6: CONCLUSION AND RECOMMENDATION 53

6.1 Conclusion 53
6.2 Limitation and Recommendation 54
REFERENCES 56
APPENDIX A : Full Coding of GPS Child Tracking with GSM Module 59
APPENDIX B : The location that has been trace 64
