**MAPPING OF SEDIMENT EROSION AND
DEPOSITION AT SUNGAI KILIM USING SENTINEL-
2A SATELLITE**

MOHAMAD DANIEL BIN MOHAMED ESA

Thesis submitted in fulfillment
of the requirements for the degree of
Bachelor of Science (Hons.) Marine Technology

Faculty of Applied Sciences

January 2020

AUTHOR'S DECLARATION

I declare that the work in this thesis was carried out in accordance with the regulations of Universiti Teknologi MARA. It is original and is the results of my own work unless otherwise indicated or acknowledged as referenced work. This thesis has not been submitted to any other academic institution or non-academic institution for any degree or qualification

I, hereby acknowledge that I have been supplied with the Academic Rules and Regulations for Post Graduate, Universiti Teknologi MARA, regulating the conduct of my study and research.

Name of Student : Mohamad Daniel Bin Mohamed Esa

Student I.D. No. : 2017442686

Programme : Bachelor of Science (Hons.) Marine Technology
AS254

Faculty : Applied Sciences

Thesis Tittle : Mapping of Sediment Erosion and Deposition at Sungai
Kilim

Signature of Student :

Date : January 2020

ABSTRACT

Sungai Kilim is a major attraction for the tourism and research sector of Pulau Langkawi. Since it was declared by UNESCO in 2007 and known as Kilim Geoforest Park. This tourist attraction has slightly changed the physical environment of the river. Monitoring the river is very important but will cost a lot of money and one of the most cost-effective techniques is using satellite surveillance. There have been numerous studies using paid and non-paid satellite services that have been conducted to identify the effects and developments of erosion and sedimentation processes that have occurred in the river. Among the major factors contributing to this change is anthropogenic activity. Priority monitoring of this river erosion and sedimentations may help in identifying and protecting shallow river areas that will have an impact in the future. In this research, the resulting changes were applied using the Stumpf algorithm and the identification of river depths was supported using the bathymetry method. It turns out that the use of Sentinel-2A Satellite with highly-produced images has proven to be a promising development and save time in acquiring data. The result of this experiment is to identify the highest percentage of erosion and deposition that occurred from the years of 2016 until 2019. Identify which area could have an impact the most from this sediment erosion and deposition then determine the depth of Sungai Kilim. The highest percentage of erosion was recorded is 99.85% and the lowest percentage of erosion is 34.31%. The highest percentage of deposition is at 91.47% and the lowest is at 3.35%. Mostly area with the highest deposition is at boat point, Kilim jetty and highest erosion are the main ways of traveling boat for eco-tourism activity and the narrow channel (estuary) of Sungai Kilim. The depth was recorded is at 18 m deepest and shallowest at 1 m. The conclusion from this research is anthropogenic activity has made the sediment erosion and deposition in the river bed.

TABLE OF CONTENTS

	Page
AUTHOR'S DECLARATION	ii
ABSTRACT	iii
ACKNOWLEDGEMENT	vi
TABLE OF CONTENTS	vi
LIST OF FIGURES	viii
LIST OF ABBREVIATIONS	ix
CHAPTER ONE INTRODUCTION	1
1.1 Background of Study	1
1.2 Problem Statement	3
1.3 Significance of Study	4
1.4 Objectives	4
CHAPTER TWO LITERATURE REVIEW	5
2.1 Coastal and Estuaries Mapping	5
2.2 Sedimentation at Estuaries	6
2.3 Erosion and Deposition at Estuaries	6
2.4 Sentinel-2A Satellite Image	7
2.5 Sediement Classification Using Satellite Image	8
2.6 Satellite Derived Bathymetry	9
2.7 Acoustic	10
CHAPTER THREE RESEARCH METHODOLOGY	11
3.1 Study Framework	11
3.2 Data Acquisition	12
3.3 Pre-Processing	12
3.4 Satellite Image Processing	13
3.4.1 Sentinel-2A Mapping	13
3.4.2 Satellite Derived Bathymetry	13

3.5	Ground Truth (AGDS)	14
3.6	Analysis	15
3.7	Map and Display Representation	16
CHAPTER FOUR RESULTS AND DISCUSSION		17
4.1	Determining Depth of Study Area	17
4.2	Determine Percentage of Erosion and Deposition	18
4.3	Overall of Erosion and Deposition Changes from 2016 until 2019	20
4.4	Changes of Images from 2016 until 2019	21
CHAPTER FIVE CONCLUSION AND RECOMMENDATION		24
REFERENCES		25
APPENDICES		30
AUTHOR'S PROFILE		37
