REPORT
SUBMITTED TO
FACULTY OF COMPUTER AND MATHEMATICAL SCIENCES
UNIVERSITI TEKNOLOGI MARA
AS PART OF REQUIREMENT
FOR
BACHELOR OF SCIENCE (HONS) (STATISTICS)

JULY 2012
ACKNOWLEDGMENT

In the name of ALLAH S.W.T, the Most Gracious and the Most Merciful Lord, I want to express my gratitude of thanks to ALLAH S.W.T. for giving me a good health and strength so I enable to complete this project. I also feel very grateful and appreciate the opportunity being an internship at the Hospital Raja Perempuan Zainab II (HRPZII). I wish to express my deepest appreciation to the supervisor at Universiti Teknologi MARA (UiTM) Kota Bharu, PM Napisah Binti Hj Safii for her continuous guidance, helpful suggestion, close supervision and moral encouragement throughout the semester to complete this study. All the kindness and interesting discussion that were given to me during my industrial training helped me a lot. The highest appreciation to Madam Mazirawati Md Zain as my supervisor for giving me the chance to work under her supervision and giving full support in all guidance, advice and commitment upon my effort to settle this industrial training. I also want to thanks to all staff of HRPZ II especially Asset of Unit for their corporations and support. A special thank to my parents, friends and to all those whom directly or indirectly help me to complete this course. I really appreciated all of my experience while doing my internship and I will take it as guidance and benefit it in future.

Thank you.
ABSTRACT

The objectives of this study were to identify the pattern of time series data for the total inpatient admissions, to find the appropriate forecasting model and to forecast the number of monthly inpatient admissions. A data set on monthly inpatient was collected from the Hospital Raja Perempuan Zainab II (HRPZ II), consisting of 108 monthly observations from January 2003 to December 2011. The analyses were conducted by using Univariate Modeling Technique. The six statistical forecasting methods used are naïve forecast, single exponential smoothing, double exponential smoothing, holt’s method, adaptive response rate exponential smoothing (ARRES) and holt’s winters as implemented in the software Minitab and Microsoft Excel. Results showed that the holt’s-winters trend and seasonality forecasting model is the best to use for future forecast for monthly inpatient. Time series analysis is shown to provide a useful, readily available tool for predicting the number of inpatient. The approach and lessons from this experience may assist other hospitals and to conduct their own analysis to aid decision planning.
TABLE OF CONTENTS

CONTENTS

ACKNOWLEDGEMENT iii
ABSTRACTS iv
TABLE OF CONTENTS v
LIST OF TABLE viii
LIST OF FIGURE ix
LIST OF APPENDICES x

CHAPTER 1: INTRODUCTION OF INDUSTRIAL TRAINING

1.1. Background of industrial Training 1
1.2. Objectives of industrial Training 1
1.3. Industrial Training Attachment 2
1.3.1. Profile of the Organization 2
1.3.2. Organization Structure 4
1.3.3. Profile of Department 5
1.3.4. Objective of the Organization 6
1.3.5. Mission of Organization 6
1.3.6. Mission of Organization 6
1.3.7. Industrial Training Tasks 6
CHAPTER 2: RESEARCH PROJECT

2.1 Introduction and Background of the Study 7
2.2 Problem Statement 8
2.3 Objectives of the Study 9
2.4 Significance of the Study 9

CHAPTER 3: LITERATURE REVIEW 10

CHAPTER 4: METHODOLOGY

4.1. Introduction 12
4.2. Data Sources 12
4.3. Ethical Consideration 12
4.4. Method of Data Analysis 13
4.4.1 Naïve Forecast 14
4.4.2 Single Exponential Smoothing Technique 14
4.4.3 Double Exponential Smoothing Technique 15
4.4.4 Holt’s Method 16
4.4.5 Adaptive Response Rate Exponential Smoothing (ARRES) 17
4.4.6 Holt’s Winter Trend and Seasonality (Multiplicative) 18
4.5 Error Measure 20
4.5.1 Mean Square Error (MSE) 20
4.5.2 Mean Absolute Percentage Error (MAPE) 21
4.6 Determine Initial Value 22
