CHAPTER 1: INTRODUCTION.....	1
1.1 Motivation.....	1
1.2 Problem Statement.....	5
1.3 Objective.....	6
1.4 Scope of Project.....	7
1.4.1 Research Scope.....	7
1.4.2 Research Limitation.....	7
1.5 Significance of Project.....	8
1.5.1 Multi-Server Queuing Theory Model (M/M/s).....	8
1.5.2 Simulation Model.....	8
1.6 Definition of Terms and Abbreviations.....	9
CHAPTER 2: BACKGROUND THEORY AND LITERATURE REVIEW.....	11
2.1 Background Theory.....	11
2.1.1 Queuing Theory Model for M/M/1.....	11
2.1.2 Queuing Theory Model for M/M/s.....	13
2.1.3 Simulation Model.....	14
2.1.4 ARENA Simulation Software.....	15
2.2 Literature Review.....	16
2.2.1 Applications of Single Channel Queuing Theory Model.....	16
2.2.2 Applications of Multiple Chanel Queuing Theory Model (M/M/s).....	18
2.2.3 Applications of Simulation Model.....	20
2.2.4 Applications of Simulation with ARENA Software.....	22
CHAPTER 3: METHODOLOGY.....	24
3.1 Characteristics of Queuing System.....	24
3.1.1 Arrival Pattern.....	24

3.1.2 Service Pattern .....	24
3.1.3 The Queue Discipline .....	24
3.1.4 System Capacity.....	25
3.1.5 Service Channels.....	25
3.2 Methodology .....	26
3.3 Flowchart of Computing the Queuing Theory Model and Simulation.....	30
3.3.1 Multiple Server Queuing Theory Model with Poisson Arrivals and Exponential Service Time .....	31
3.3.2 Simulation with ARENA Software.....	33
3.3.3 Validation of ARENA Software .....	37
CHAPTER 4: IMPLEMENTATION .....	38
4.1 Calculation for Queuing Theory Model – M/M/6 Theorem .....	38
4.2 Simulation with ARENA Software and Analyzing the Data.....	42
4.3 Verify ARENA Using Statistical Hypothesis Testing .....	53
CHAPTER 5: RESULTS AND DISCUSSION.....	55
5.1 Multi-Server Queuing Theory Model Analysis .....	55
5.1.1 M/M/4 Queuing Theory Model .....	55
5.1.2 M/M/5 Queuing Theory Model .....	56
5.1.3 M/M/6 Queuing Theory Model (Original Model).....	56
5.2 Comparison of Multi-Server Queuing Theory Model .....	57
5.3 Validation of ARENA Using Statistical Hypothesis Testing .....	58
5.4 Comparison of Queuing Theory Model - M/M/6 and ARENA SIMAN Report .....	59
5.4.1 Utilization Rate, $\rho$ .....	59
5.4.2 Average Time Customer Spends Waiting in The System, $W$ .....	59
CHAPTER 6: CONCLUSION AND RECOMMENDATION .....	60
6.1 Conclusion .....	60
6.2 Recommendation .....	60

## **ABSTRACT**

A queue is something that usually happened in our daily life. People tend to face queue situation at the hospital, bank counter, post office and many more to get the service. However, long and unmanaged queues should not have happened. The effect of the queue is wasting time since people need to wait for hours before being served. Other than that, every organization has their own limited time to serve their customers. Due to that limitation, it leads to overcrowding and unmanageable queues for the customers.

In pursuance of this, queuing theory model will be applied for the situation in Road Transport Department (JPJ) located in Senawang, Negeri Sembilan. One of the main focuses is to analyze the customer waiting time in the system by queuing model and simulation model. M/M/s queuing model is being performed on the collected data. The data is collected for one days for about 4 hours. Furthermore, the simulation model is very applicable to every organization. This model will be carried out without built it in the real-world system. Therefore, simulation model by using ARENA software is used to build and verify the result based on the observation made. This research paper will be obliging the Road Transport Department' director in making the best decision to increase the performance of the services and increases the customer's satisfactions towards the services provided.
