ACKNOWLEDGEMENTS	iii
TABLES OF CONTENTS	iv
LISTS OF TABLES	v
LIST OF FIGURES	vii
LIST OF ABBREVIATIONS	viii
ABSTRACT	ix
ABSTRAK	x
 CHAPTER 1 INTRODUCTION	
1.1 Problem statement	1
1.2 Significance of study	1
1.3 Objectives	2
 CHAPTER 2 LITERATURE REVIEW	
2.1 Banana	3
2.1.1 Types of banana	3
2.1.2 Nutritional properties of banana	4
2.1.3 Browning of banana	7
2.1.4 Maturity indices of banana	8
2.2 Starch	10
2.2.1 Tapioca starch	11
2.3 Ingredients in ' <i>Kuih Bangkit</i> '	12
2.3.1 Banana starch	13
2.3.2 Margarine	13
2.3.3 Coconut milk	15
2.3.4 Eggs	16
2.3.5 Icing sugar	17
2.4 Production of ' <i>Kuih Bangkit</i> '	18
 CHAPTER 3 METHODOLOGY	
3.1 Raw materials and chemicals	21
3.2 Extraction of banana starch	21
3.3 Formulation of ' <i>Kuih Bangkit</i> '	22
3.4 Production of ' <i>Kuih Bangkit</i> '	23
3.5 Sensory evaluation	24
3.6 Physical analysis	25

3.6.1	Determination of texture	25
3.6.1.1	Fracturability	25
3.7	Chemical analysis	25
3.7.1	Determination of protein	26
3.7.1.1	Digestion operation	26
3.7.1.2	Distillation operation	26
3.7.1.3	Titration	27
3.7.2	Determination of fat	27
3.7.3	Determination of ash	28
3.7.4	Determination of moisture content	28
3.7.5	Determination of dietary fiber	29
3.7.6	Determination of carbohydrate	30
3.8	Statistical Analysis	30

CHAPTER 4 RESULTS AND DISCUSSIONS

4.1	Starch extraction yield	31
4.2	Sensory evaluation	32
4.2.1	Appearance	32
4.2.2	Color	33
4.2.3	Taste	33
4.2.4	Texture	34
4.2.5	Overall acceptability	34
4.3	Chemical analysis	35
4.3.1	Fat content	36
4.3.2	Carbohydrate content	36
4.3.3	Crude fiber content	37
4.3.4	Protein content	38
4.3.5	Moisture content	38
4.3.6	Total ash	38
4.4	Physical analysis	39
4.4.1	Fracturability	39

CHAPTER 5 CONCLUSION AND RECOMMENDATION 41

APPENDICES 45

CURRICULUM VITAE 53

LIST OF TABLES

Table	Caption	Page
2.1	Types of resistant starch.	6
2.2	Proximate composition of the edible portion of banana at different stages as classified by the color of the banana peel.	9
3.1	Formulation of ' <i>Kuih Bangkit</i> '.	22
4.1	Yield and color of starch from different types of banana	31
4.2	Mean value of the sensory evaluation for ' <i>kuih Bangkit</i> ' with the substitution of different type of starch.	32
4.3	Mean value of the proximate analysis for ' <i>kuih Bangkit</i> ' with the substitution of different type of starch.	36
4.4	Mean value of fracturability for ' <i>kuih Bangkit</i> ' with the substitution of different type of starch.	39

ABSTRACT

PHYSICOCHEMICAL CHARACTERISTICS AND SENSORY EVALUATION OF '*KUIH BANGKIT*' MADE FROM BANANA STARCH

Interest in nutraceutical food has increase in consumer demands such as high fiber food products. However, addition or substitution of the ingredient gives several differences in taste, appearance, color and texture to the products. The objective of this final year project is to developed '*Kuih Bangkit*', by substituting tapioca starch as the main ingredient with banana starch from different types of unripe banana such as '*Pisang Rastali*', '*Pisang Berangan*', '*Pisang Nangka*'. The study involved sensory analysis to determine the best formulation of cookies among the three types of banana. Besides that, chemical analysis was conducted to determine the proximate analysis between cookies from tapioca starch which was the control and the best cookies from banana starch. The effect of this substitution on the cookies was also determined by measuring the fracturability. From the analysis conducted, the best formulation which was most preferred by the panelist was cookies which were substituted with 50% of '*Nangka*' banana starch with the mean value of 7.60. Proximate composition studies showed that cookies from banana starch contained 44.9% crude fiber, 33.7% carbohydrate, 16.4% fat, 2.4% protein, 2.0% moisture, and 0.6% ash. While control cookies contained 43.6% crude fiber, 34.0% carbohydrate, 17.7% fat, 3.0% moisture, 1.4% protein and 0.25% ash. From the texture analysis, control cookies required 744.67g force while cookies from banana starch required 1150.67g to fracture.
