Thesis Title : In-situ supercritical methanol transesterification for production of biodiesel from Jatropha curcas L. seeds.

Signature of Candidate : .................................................................
Date : October 2010
In-situ supercritical methanol transesterification for production of biodiesel from *Jatropha curcas* L. (JCL) seeds was successfully carried out via 1000 ml high-temperature high-pressure batch-wise reactor system in an absence of catalyst. In order to maximize the percent of crude biodiesel and FAMEs yield, four process variables were studied in this experiment, i.e. temperatures (180 to 300 °C), pressure (6 to 18 MPa), reaction time (5 to 35 min) and seeds-to-methanol ratio (1:15 to 1:45) using methanol as a solvent as well as reactant. Response Surface Methodology (RSM) was used to reduce the number of experimental runs required to generate sufficient information for a statistically acceptable results. In order to determine the best conditions of the variables in this in-situ process, Central Composite Rotatable Design (CCRD) was used for regression analysis and analysis of variance (ANOVA). Using RSM, the best conditions were chosen at temperature of 280.0 °C, pressure of 12.7 MPa, 30.0 min of reaction time and 1:40 (w/v) of seeds-to-methanol ratio. Interestingly, the qualitative Gas Chromatography (GC) analysis oil crude biodiesel showed the presence of FAMEs, indicating that the transesterification reaction had occurred during the in-situ process. The average saturated FAMEs content of the seed samples is low: 18.1% for methyl palmitate (C17:0) and 7.1% for methyl stearate (C19:0). The average content of the unsaturated FAMEs, methyl oleate (C19:1) and methyl linoleate (C19:2) is considerably higher which is 39.5 and 33.2%, respectively which are comparable to the fatty acid composition in crude JCL oil feedstock. The properties of biodiesel produced from this in-situ supercritical methanol transesterification were comparable with fuel properties of commercial No. 2 Diesel. It was found that specific gravity of JCL biodiesel was 0.87 g/cm³ and it falls between the ASTM D6751 ranges. The kinematic viscosity is 5.27 cSt. The flash point was determined to be 100 °C while the pour point of JCL biodiesel was measured to be 0 °C which is slightly higher than that of No. 2 Diesel fuel. The cloud point was reported to be -2.06 °C. The calorific value of JCL biodiesel is 39.3 MJ/kg, which is almost 88% of the calorific value of diesel (44.8 MJ/kg). Thus, the high-temperature high-pressure batch-wise reactor system could be a promising approach in production of JCL biodiesel from in-situ supercritical methanol transesterification.
TABLES OF CONTENTS

TITe PAGe
CANDIDATE'S DECLARATION ii
ABSTRACT iii
ACKNOWLEDGEMENTS iv
TABLE OF CONTENTS v
LIST OF TABLES ix
LIST OF FIGURES xiii
LIST OF PLATES xvii
LIST OF APPENDICES xviii
LIST OF ABBREVIATIONS xxi

CHAPTER ONE: INTRODUCTION
1.1 The Global Energy Scenario 1
1.2 Alternative Energy – Biodiesel 3
   1.2.1 History 3
   1.2.2 The Role of Biofuel 3
1.3 Jatropha curcas Linnaeus 5
1.4 Problem Statements 6
1.5 Goal and objectives 9
1.6 Outline of the Thesis 10

CHAPTER TWO: LITERATURE REVIEW
2.1 Introduction 11
2.2 Oil Extraction 11
   2.2.1 Mechanical Pressing 12
   2.2.2 Soxhlet Extraction 13
   2.2.3 Use of Enzyme in Solvent-Bases and Pressing Extraction 15
   2.2.4 Supercritical Fluid Extraction 16
2.3 Process of Biodiesel Production 21
2.3.1 Direct Use or Blending  
2.3.2 Microemulsions  
2.3.3 Pyrolysis  
2.3.4 Transesterification  
  2.3.4.1 Homogeneous Alkali (Base) Catalyzed Transesterification  
  2.3.4.2 Homogeneous Acid-Catalyzed Transesterification  
  2.3.4.3 Heterogeneous Acid and Base-Catalyzed Transesterification  
  2.3.4.4 Enzymatic Catalyzed Transesterification  
  2.3.4.5 Supercritical Methanol Transesterification  
2.4 In-situ Transesterification  
2.5 Optimization of Process Parameter using Response Surface Methodology  
  2.5.1 Central Composite Rotatable Design (CCRD)  

CHAPTER THREE: MATERIALS AND METHODS  
3.1 Materials and Chemicals  
  3.1.1 *Jatropha curcas* L. sample  
  3.1.2 *Jatropha curcas* L. Seeds Preparation  
  3.1.3 Chemical Used in In-situ Supercritical Methanol Transesterification Experiment  
  3.1.4 Chemicals Used in Fatty Acid Methyl Esters Analysis  
3.2 In-situ Supercritical Methanol Transesterification System Set-up  
  3.2.1 In-situ Supercritical Methanol Transesterification Experiments  
3.3 In-situ Transesterification via Soxhlet Extraction  
3.4 Decolourization of crude biodiesel  
3.5 Determination of Biodiesel Properties  
  3.5.1 Specific Gravity  
  3.5.2 Kinematic Viscosity  
  3.5.3 Cloud Point and Pour Point  
3.6 Instrumental Analysis  
  3.6.1 Gas-Chromatography Analysis
