ABSTRACT

The purpose of this study to identify what are the efficient services provided land at Land and Survey Department in Kota Kinabalu. The services are focus on land section. This study was done using self-developed questionnaire that involved 100 respondents who use the services on the Land and Survey Department. The findings are, the efficient services are on the procedure of land surveying services and the inefficient services are on the procedure of application land. It is concluded that the efficient services are on the land surveying services.

ACKNOWLEDGEMENT

Completing this research was a challenge for us. However, we had the help from many parties to complete this project. Dr. Hj. Zuraidah Zaaba, our supervisor always kept us motivated and stays on course until completing our research. She was insistent on the correct way on doing research. We did not quite appreciate back then. But looking back, her toughness made us work harder and for that we will always be grateful. We thank you her from the bottom of our hearts for being there in our moments of needs.

I would like to thank the lecturers who taught us many things about research and skillfully did not highlight the difficult side of doing research. We learn valuable lessons about action research. Things were not always according to plan but we made adjustments that was justified or qualified.

We would like to thank God the Almighty because without the blessing, we would not have successfully completed this study.
