

UNIVERSITI TEKNOLOGI MARA

**TRUST CONTRIBUTING FACTORS IN M-LEARNING
AMONG UNIVERSITI TEKNOLOGI MARA STUDENTS**

NORAZLINAWATI WALID

Report submitted in partial fulfillment of the requirements
for the degree of

Master of Science (Information Technology)

Faculty of Computer and Mathematical Sciences

July 2012

ABSTRACT

The use of m-learning is gaining attention. However, trustworthiness towards the effectiveness of the learning sessions using m-learning is still questioned such as the accuracy, validity and understandability of information dissemination. Therefore, this research focuses on trust contributing factors in m-learning among Universiti Teknologi MARA (UiTM) students to delve into this issue. Three components of factors are concerned which are demographic, build trust and sustain trust factors. Two models are adapted and modified which are 'Build Trust in Learning Network Framework' and 'Derived Trust Building Framework'. 19 trust factors and seven demographic factors were used as variables. Data collected using self-administered surveys. Usable questionnaires were analyzed using descriptive analysis and inferential analysis. For model testing, a Structural Equation Modeling (SEM) method was adopted. The findings of this research show that the m-learning users among UiTM students that are more trustworthy towards m-learning are 'male', '28-38' years old, from 'main campus', 'part time students', period of using was more than five years, frequency of using is 'everyday' and the iPhone users. Meanwhile, the trust factors that are able to influence users to trust m-learning in descending order based on percentage are 'Familiarity', 'Information Quality', 'Interaction', 'Feasibility', 'Goal Setting', '3rd Party Recognition', 'Attractive Reward', and 'Rules' to build the trust; and 'Consistency', 'Reliability', 'Experience Sharing', 'Integrity', 'Security Control', 'Community Building', 'Open Communication', 'Site Quality', 'Feedback', 'Time', and 'External Auditing' to sustain the trust. However, from the EFA result it collectively groups the factors into System Ability, Policy Setting, System Functionality, and Incentive Program as Build Trust Factors; and Security, Information Reliability, Feedback, Added-Value, Open Communication, and Experience Sharing as the Sustain Trust Factors. But, from the model testing result, it was suggested that both models need some modification.

ACKNOWLEDGEMENT

In the name of Allah, the Most Gracious and the Most Merciful Alhamdulillah, all praises to Allah for the strengths and His blessing in completing this dissertation. Moreover, this dissertation would not have been possible without guidance and help of several individuals who in one way or another contributed and extended their valuable assistance in the preparation and completion of this research.

First and foremost I proffer my sincerest gratitude to my supervisor, Dr. Emma Nuraihan Mior Ibrahim, who has supported me throughout my dissertation with her patience and knowledge. Without her, this dissertation would not have been completed or even written.

In addition, I would like to thank Dr. Zainuriyah Ahmad Khatab a Head Assistant Director of Research and Development Unit in Lembaga Peperiksaan for sharing ideas and experiences especially regarding the factor analysis method.

Last but not the least, I would like to thank and express my great appreciation to my understanding and affectionate husband Muhammad Hazami Sulaiman, my families, my bosses, and all my fathom friends that always support me throughout my research. Thank you very much.

CHAPTER 1: INTRODUCTION	1
1.1 Research Background	3
1.1.1 Research Background on Trust Element	4
1.1.2 Research Background on Mobile Learning	5
1.1.3 Trust in Mobile Learning	8
1.1.4 Demographic Factors	9
1.2 Problem Statement	10
1.3 Research Scope	12
1.4 Research Aim	14
1.5 Research Questions And Objectives	14
1.6 Research Approach	15
1.7 Research Design	16
1.8 Research Significant	17
CHAPTER 2: LITERATURE REVIEW	19
2.1 Research on Trust	19
2.1.1 Trust Concept	19
2.1.2 Trust in Innovation	22

CHAPTER 1

INTRODUCTION

Learning method has constantly evolving from day to day in acquiring an effective and efficient learning system. At the same time, it is to ensure that the development of learning methods in line with current growth including technology development. According to Anderson (2011), connectivity pedagogy is a new phase in education system which one of the supporters for this pedagogy was mobile learning (m-learning). m-learning allows learning process to be continuous anytime regardless of geographical location (Brown, Campbell, and Ling, 2011; Tina, Mansor Fadzil, and Norziati Mansor, 2011; Sharples, 2010).

However, this new method is still plagued with some questions among researchers, educators and learners because the learning focus is being distracted by the technology itself (Goth, Frohberg, Schwabe, 2006). Some of the main discussion argues the ability of m-learning in achieving one of the main objective in learning process (Baggio, and Beldarrain, 2011) whereby learning should be able to provide a real understanding of what is learned (Huitt, 2011; Pfannkuch, and Ben-Zvi, 2011; Robertson, 2010; Perkins, 1993). Although the use of m-learning is cheaper and easier to disseminate information, but sometimes the information is difficult to understand; *“Information is Cheap, Understanding is Priceless”* (Baggio, 2011). By then, it can violate the user's trust in using m-learning (Baggio, et al., 2011). For example, a virtual group of learners and instructor discuss on concept of shareholder in business using forum in m-learning application. Some learners can easily understand but maybe there is a learner who is not able to understand.
