TABLE OF CONTENTS	PAGE No.
APPRECIATION	5
EXECUTIVE SUMMARY	7
CHAPTER 1: INTRODUCTION	8
1.1 Introduction	8
1.2 Background Study	8
1.3 Problem Statement	9
1.4 Research Questions	10
1.5 Research Objectives	10
1.6 Research Outcomes	10
1.7 Gantt Chart	10
1.8 Summary	11
CHAPTER 2: LITERATURE REVIEW	12
2.1 Introduction	12
2.2 Industrial Training	12
2.3 Industrial Training System	13
2.4 Comparisons with Existing Systems	14
2.4.1 Universiti Teknologi Malaysia (UTM)	14
2.4.2 Universiti Kebangsaan Malaysia (UKM)	15
2.4.3 Multimedia University (MMU)	16
2.5 Implications of Literature Review to Current Project	17
2.6 Summary	17
CHAPTER 3: METHODOLOGY	18
3.1 Introduction	18
3.2 Methodology	18
3.3 System Planning and Requirements	20
3.4 Summary	25
CHAPTER 4: RESULTS AND DISCUSSION	26
4.1 Introduction	26
4.2 Interfaces of the Prototype	26

FINAL REPORT: DANA KECEMERLANGAN SIG

4.3	Student Module	26
4.4	Coordinator Module	29
4.5	Lecturer Module	31
4.6	Discussion	33
4.7	Expert Evaluation	33
4.8	Summary	33
CHAPTER 5: CONCLUSION		34
5.1	Introduction	34
5.2	Limitation and Future Enhancements	34
5.3	Conclusion	35

APPRECIATION

In the name of Allah the Most Gracious and the Most Merciful.

First of all, we would like to extend our deepest praise to Allah S.W.T for giving us the determination to complete this project.

This project is a collaborative effort of many people, especially the project members. The effort and contribution made by every single one of us have made the completion of this project possible.

Thank you.

EXECUTIVE SUMMARY

Industrial training refers to the placement of students at selected organizations in their respective field of study. Usually several parties are involved i.e. the students, the industrial training coordinator, the academic supervisor and the industry supervisor. However, most activities are still performed manually including student's placement, reporting and assessment. In addition, integration among all parties is still lacking. The industrial training process consumes a great deal of time and energy particularly in acquiring the placements for all the students. First, the process places a heavy workload on the industrial training coordinator since the coordinator needs to manage the entire document required for every student. Unfortunately, the documentation is still being managed manually, heavily dependent on papers. Second, the coordinator must handle all the communication to and from the students and the industry regarding the current status of each application. Third, sometimes it takes time for companies to confirm the availability of the internship position, although the students have contacted them personally. The objectives of the research project are (1) to identify the requirements for managing industrial training process and (2) to design and develop the Industrial Training Management System (INTRAS). This research design employs a design and creation strategy that focuses on developing an artifact. The research process will follow the Systems Development Life Cycle (SDLC) methodology that will employ the Rapid Development (RAD) model. The outcome from this research project is an online industrial training management system which is a web-based system. In this system, the industrial training coordinator manages related activities of industrial training process. It will be used by all the related parties i.e. the students, the industrial training coordinator, the academic supervisor and the industry supervisor.
