ABSTRACT

This study is about the second- and fourth-order iterative methods. Also, the comparison of the effectiveness of the chosen iterative methods, which are the Newton method (NM), Three-Step method (TSM), Yun method (YM) and Rajni Sharma method (RSM) for solving nonlinear equations. All those methods will be compared and tested with eight different types of test functions and with different tolerances. The comparisons are centered around evaluating accuracy, the quantity of iterations required, and CPU time across various methods or algorithms. These criteria's serve as the foundation for assessing how well each method performs in solving the given problems. These comparisons are crucial for determining the most effective approach to solving the problems at hand, considering both the precision of the results and the computational efficiency required. According to the investigation, the Rajni Sharma method is the most efficient method among those methods. Several numerical examples are given to illustrate the efficiency and performance of all the methods.

ACKNOWLEDGEMENT

Bissmillahirrahmanirrahim,

Alhamdulillah. Thanks to Allah SWT, whom with His willing giving me the opportunity to complete this Final Year Project in a well health. Firstly, I would like to express my deepest thanks to, Madam Noor Khairiah binti Razali, as my supervisor for her patience, insightful comments, helpful information, practical advice and unceasing ideas that have always helped me tremendously in my research and writing of this thesis. Without her support and guidance, this project would not have been possible. I could not have imagined having a better supervisor in my study.

Furthermore, I would like to extend my gratitude to my family especially to my mom, Hadijah binti Rashidi, thank you for prayers, supporting and believing me. Your constant encouragement and words of wisdom have been the force behind my achievement. I love you so much, mom.

Also not forgetting about my partner and also my classmate, Muhammad Syafiq bin Salleh for always being there in the meeting with our supervisor and always bringing positive vibes along the way this project also like to thanks to my other classmates and friends for always bring joyfulness every single day. Their presence and assistance have been invaluable in making this journey more enjoyable and rewarding. I also want to thank for those individuals who have directly or indirectly contributed to the completion of this project, I offer my heartfelt thanks. Thank you.
