

CHAIR DESIGN BASED ON THE ANTHROPOMETRICS

KHAIRUL AMMRIE B. AHMAD

**DIPLOMA IN WOOD INDUSTRY
UNIVERSITI TEKNOLOGI MARA**

2002

ACKNOWLEDGEMENTS

I would like to express my deepest appreciation sincere gratitude to my advisor, Cik. Norhafizah Rosman for his encouragement and guidance in designing and implementing this project.

Sincere thanks are also due to Assoc. Prof. Dr. Jamaludin Bin Kassim, Program Head of Diploma In Wood Industry, UiTM Pahang, for kindly extending all facilities and cooperation given during the course of study.

I also would like to all my friends for their support and advices, without them this final project paper can't be finished and success.

Last but not least, thanks are also due to my beloved parents for their moral and financial support throughout the years study.

CHAIR DESIGN BASED ON THE ANTHROPOMETRICS

By

KHAIRUL AMMRIE AHMAD

September 2002

This project was carried out get the different ship between the normal design of chair and the anthropometrics not least the ergonomics design. It also to show that the anthropometrics design is better than normal design. It also can protected the user from the injuries causes while they are us it.

The most important thing before make a design is the comfortability to user. This is because, to make that all the users get the comfortability when they are use it and realize the important things in designing and making the chair.

It also can protected the user from the injuries causes while they are us it. The causes like ischial tuberosities and blood circulation always happen if the design not suitable for user. It also to make sure all the user get all comfortability and realize the important things in designing the chair.
