

SAWN HARDWOOD LUMBER GRADING

BY

NOOR ROSIDA BINTI RASDI

Final project submitted in partial Fulfillment for the Diploma in Wood Industry

Faculty of Applied Sciences, Universiti Teknologi MARA

October 2004

ACKNOWLEDGEMENT

Alhamdulillah, I can finally complete this final project (thesis) on time.

Firstly, I would take these opportunities to express my special thanks to ALLAH S.W.T for His blessing and giving me the strength to complete my final project.

I would like to thank to my project advisor Prof. Madya Abdul Jalil Bin Ahmad for his guardian and for helping me at every phase of my final project until completion. He is so generous in lending me helping hand and showed me the correct way of doing my work. I would like to express my most sincere thanks to him.

A lot thanks for my parents and my family to support me from back in completing the final project. Without them I cannot complete this project. They give me support to make the final project a success.

Lastly, I also extend my appreciation to those who are involved either directly or indirectly in completing this project. I believe without their help, I would not be able to complete this final project.

THANKS...

October 2004

ABSTRACT

Grading are systems of classification used to separate lumber into classes on the basis of the number, size and character of such physical features such as knots, splits, check, wormholes, wane, pitch streaks and pockets. Grading should follow the steps to determine the standard rules for the sawn hardwood. Every country has different steps and standard for the grading.
