

**SURVEY ON SAFETY STATISTIC'S SAWMILL IN
KELANTAN**

BY

NOOR HAZAM BINTI AHMAD

Final Project Submitted in Partial Fulfillment for the Diploma in Wood

Industries, Faculty of Applied Science, Universiti Teknologi MARA

March 2004

ACNOWLEDGEMENT

Firstly, I would like to take this opportunity to express my special thanks to Allah S.W.T for blessing and strength rendered to me to complete my final project and all my duties as a student.

I also like to express my deepest appreciation and have good luck to get knowledge and sincere gratitude to my advisor Miss Norhafizah Bt Rosman for her encouragement and showing the correct ways of performing my project. Her gives full of commitment and helps me to do all works. She is advising me properly.

Besides that, I would like to thanks Associate. En. Wan Mohamad Nazri Bin Wan Mohamed our Programme Head of Diploma Industry Perkayuan, UITM Pahang, for kindly give cooperation during of study. Also to my beloved parents and all my friends for continuous support and encouragement towards the completion of this final project. So, with honestly, from this project we get many experiences. Thanks a lot to staff in DOSH (Department of Safety and Health) branch Kota Bharu Kelantan for give me more information about my project paper widely. Thank you so much to all.

CHAPTER 1

INTRODUCTION

An accident may define as an unexpected occurrence, which hinders or stops the continuation or flow of some process. Accident may involve injuries to persons or damage to plants or both.

DOSH (1970) state that, accident broadly speaking, an indication of inefficiency is not yet generally appreciated in sawmill or any industries. Damage to plants has always been a matter for concern because it necessitates the expenditure of capital to replace or repair the damage equipment and this reflected in the profit and loss account.

The Kelantan sawmill implies more people for every year and potentially exposed to safety and health risks. The risks can be either associated with machine work. Sawmill are the place that causes all of the accident. The main factor causes by sawmill in Kelantan like the careless of worker, employer not prepare good equipment and always rushing the machine. So, the unexpected accident will appear.

According to OSHA 2002, the employee is a person must play the role in worker safety. They need to ready a safety place and make programmed in training their worker. The worker also needs to follow the safety rules and use the machine or other technology goodly. The safety and health important not cause by the rules and moral but it must
