## ACKNOWLEDGEMENTS

Alhamdulillah, a lot of gratitude to Allah the Almighty for giving me strength and opportunity to finally completing my final project.

I would like to express my deepest appreciation and sincere gratitude to my advisor, Prof. Madya Abdul Jalil Ahmad for teaching and encouraging me in doing this project. He helped me in many ways by providing information, guided me the correct method and also helping me in every way that he can in order for me to complete my task.

Thank to my beloved parents for giving me moral support throughout the process of this project. Thank you also to them for providing me the money needed to undergo this project. Thank you to all my friends for helping me by contributing ideas and comments on my paper.

Finally, I would like to express my deepest gratitude to those who are involved either directly or indirectly in completing this project. May Allah bless you all.

## **ABSTRACT**

### **WEAKNESSES & EFFECTIVENESS OF CREOSOTE AS A WOOD PRESERVATIVE**

By

**SHUBRI BIN WAGIMAN**

**MARCH 2004**

In this study, creosote as one of the popular of wood preservative was chosen. It had been used enormously throughout the world. It has been used since nineteen century and commercially in wood industry through preservation process. It is commercially made from coal tar with different of specification to suit different application. It is an effective wood preservative. The effectiveness of creosote has been studied from many methods and tests. But, it is not enough and practical. So, many observation and analysis had been made through it experience of services. Also, from that study, the weaknesses and problems of creosote had been identified and, it effectiveness is impaired. So, in this project, it contain the accumulation of facts of study on the weakness and effectiveness of creosote as a wood preservative
