ACKNOWLEDGEMENT

First and foremost I would like to thank God for giving me knowledge, intelligence and strength to complete this final year project. Not to forget to everyone who gave me support and encouragement throughout the completion of this final year project. Without all of the advices and guidance, it would be impossible for me to complete this final year project.

I am also very thankful for having such a great supervisor, Dr. Mohd Shamlie Bin Salisi, who had been willing to spend his time in supervising and providing precious information, guidance, motivation and suggestion to me throughout the completion of this final year project paper.

Last but not least, I would like to thank to my family members especially my parents for their endless love, encouragement, prayers and support. To those who are indirectly contributed in this study, your kindness means a lot to me.

Thank you very much.

ABSTRACT

The aim of this study is to investigate and analyze the relationship between the Fresh Fruit Bunches, Market Value and leverage ratio towards the profitability of the palm oil producing companies in Malaysia during 2008-2017. About 10 companies were chosen for the data collection and the whole data were the secondary data which is obtained from Thomson Reuters Data Stream and also from the Annual Reports. This study adopts panel regression model to measure the relationship between the independent variable towards the dependent variable and also to test the hypotheses. The result of this study was revealed that the fresh fruit bunches yield has significant negative relationship while the market value and debt ratio has insignificant positive relationship towards the profitability of the palm oil producing companies in Malaysia.
