ACKNOWLEDGEMENT

Alhamdulillah, first of all I would like to thank God for getting me this far as finally I am able to finish my last assignment that required by our course. This task is compulsory for final year student in UiTM and has been done eventhough there was a little bit problem while doing this assignment. Luckily all the problems can be settled down.

Besides that, a big thank you to my advisor, En. Muraddin bin Purag because without his guide this project paper cannot be done properly like this. He always supports and guides me on how to do this assignment to ensure a good outcome from research that has been studied. Apart from his professional guidance, he has been outstanding in terms of reading, reviewing and correcting this work. I thank him for his unfailing assistance, concern and encouragement.

On the other hand, a big thank you also I dedicated to all Finance's lecturers at UiTM Sabah who contributed in one way or another in my success throughout this course, who always teach and guide me to understand the things that I should know while studying throughout the entire semester and also producing good project paper work. I am most grateful.

Last but not least, I would like to thank my colleagues who always help, guide and support me while doing this final project. Finally, thank you to my family especially to my parent for their support and motivation without them I were not able to finish my study.

ABSTRACT

The purpose of this study is to examine the relationship between cash conversion cycle and profitability on 50 consumer product firms listed in Bursa Malaysia for a period of five years from 2011 to 2015. The data collected from Thomson Reuters Data Stream and firms' annual statement. The variables for this study were categorized into three part: dependent variable (Return On Equity and Return On Assets), independent variable (Cash Conversion Cycle and its component namely days inventory outstanding, days payable outstanding and days sales outstanding) and control variables (Size of Firm and Leverage). This study found a positive significant between cash conversion cycle and return on assets, and positive insignificant relationship between cash conversion and return on equity.
