

**REAL-TIME FUZZY LOGIC CONTROLLER FOR  
GLYCERIN BLEACHING PROCESS**

This report is present in partial fulfillment for the award of the  
Bachelor of Electrical Engineering (Honours)  
of  
UNIVERSITI TEKNOLOGI MARA (UiTM)

**SITI FATIMAH ADLIAH MOHD NOOR  
FACULTY OF ELECTRICAL ENGINEERING  
UNIVERSITI TEKNOLOGI MARA MALAYSIA  
40450 SHAH ALAM, SELANGOR**

## ACKNOWLEDGEMENT

In the name of Allah, The Most Gracious, Most Merciful and Him alone worthy of all praises. Alhamdulillah, with the permission of Allah S.W.T, I am able to complete this final year project and thesis successfully.

I would like to express my sincere gratitude and deepest appreciation, to my project supervisor Puan Norlaila Omar for the kindness and help on guide me doing this project. She also give me a lot of advises on how to make this project better. I also would like to convey my deepest appreciation and thanks to my project co-supervisors, Puan Zuriati Janin and En. Zakariah bin Yusuf for guiding me until the completion of the project.

Besides, I also would like to thank the other lecturers in Faculty of Electrical Engineering, Universiti Teknologi MARA Malaysia, Shah Alam for giving me extra advises upon completing this Final Year Project entitled *Real Time Fuzzy Logic Controller for Glycerin Bleaching Process*.

Finally, I would like to thank my family and friends for their endless encouragement and prayers throughout the educational years of my life. Their continuous supports will always be my motivation to survive in future.

**Siti Fatimah Adliah Mohd Noor**

Faculty of Electrical Engineering

Universiti Teknologi MARA (UiTM) Malaysia

Shah Alam, Selangor Darul Ehsan.

## **ABSTRACT**

In this project the real-time temperature control system for glycerin bleaching process using Fuzzy Logic PD-Like Controller was presented. The NI Compact DAQ (NI cDAQ) and LabVIEW were used as an interfacing system for this work. 4-20mA current signal is used to control the heater of the tank. 9 Fuzzy rules were used to compare and evaluate the best and suitable set for this application. It was found that the implementation of PD-Like Controller with 9 rules is sufficient to give high performance of heating compared to PID Controller. The results show the Real-Time system is capable of controlling the Glycerin bleaching process.

# CHAPTER 1

## INTRODUCTION

### 1.1 INTRODUCTION

To maintain and control the set point temperature of a process is a difficult task. It has been known to be intrinsically challenging due to a variety of factors such as producing slow response [1-3] because of the thermal nature in the process. Furthermore, there will predictably be further lags or time delays before it reaches a steady uniform level [2], [4] following a change of an input.

The PID controller is the most common used controllers in process control field. The selection of P, I and D values will determine whether the process is oscillatory, stable or unstable [11]. Fuzzy Logic Controller is commonly used because of its intelligence. Fuzzy Logic uses the concept of degrees rather than strictly true or false to characterize variables of interest. The degree of membership of an object in a set is subjective in nature, a matter of definition and not necessarily measurement. The ability of fuzzy logic to capture system dynamics qualitatively and execute this qualitative idea in real time situation is an attractive feature in the control of time delay system. [10]. The Fuzzy Logic Controller gives out faster response, more reliable and recovers quickly from system upsets. It also works well to uncertainties in the process variable. Fuzzy Logic Controller does not require mathematical modeling [5].
