## **ACKNOWLEDGEMENT**

First and foremost, I would like to express my deepest gratitude to Allah, the Most Gracious and the Most Merciful, for granting me the strength, knowledge, and perseverance to complete this final year project. Without His blessings, none of this would have been possible.

I would also like to extend my heartfelt thanks to my parents, whose unwavering support and encouragement have been my pillars of strength throughout this journey. Their constant prayers, sacrifices, and belief in my abilities have been a source of immense motivation for me.

I am deeply indebted to my supervisor, Ts. Dr. Hasiah Binti Mohamed @ Omar, whose expertise, patience, and constructive feedback have been crucial in shaping this project. Your continuous support and willingness to help have made this challenging task much more manageable. Your mentorship has not only guided me academically but has also played a vital role in my personal growth.

My sincerest appreciation goes to my lecturer, Madam Ummu Fatimah Binti Mohd Bahrin, for providing me with invaluable guidance and insights that have significantly contributed to the success of this project. Your dedication to teaching and your passion for the subject matter have inspired me to strive for excellence.

In conclusion, this project is a culmination of the support, guidance, and encouragement I have received from many individuals. To all who have contributed in one way or another, I extend my deepest gratitude.

## **ABSTRACT**

This study explores the application of sentiment analysis using the Naïve Bayes algorithm to understand public perceptions of marital issues, particularly factors contributing to the rising divorce rate. By analyzing data from social media, primarily Twitter, the research identifies key challenges in marriages, including communication breakdowns, financial stress, and infidelity. The Naïve Bayes algorithm was chosen for its efficiency in text classification and ability to handle large volumes of unstructured data. The results indicate that financial instability and poor communication are the most prevalent issues, with the overall sentiment being predominantly negative. The model's performance was evaluated using accuracy, precision, recall, and F1-score, demonstrating its reliability in sentiment classification. Future research can enhance classification accuracy by incorporating advanced machine learning techniques and expanding the dataset to include diverse social media platforms. These insights can assist policymakers, mental health professionals, and marriage counselors in developing targeted interventions to support healthier relationships and strengthen societal well-being.

# Table of Contents

<b>ACKNOWLEDGEMENT</b>	<b>4</b>
<b>ABSTRACT</b>	<b>5</b>
<b>CHAPTER 1: INTRODUCTION</b>	<b>8</b>
1.1 Background of Study	8
1.2 Problem Statement	11
1.3 Objectives	12
1.4 Project Scope	13
1.5 Significance	14
1.6 Conclusion	15
<b>CHAPTER 2: LITERATURE REVIEW</b>	<b>16</b>
2.1 Sentiment Analysis	16
2.1.1 Overview of Sentiment Analysis	17
2.1.2 Application in Sentiment Analysis	18
2.1.3 Method and Technique Used in Sentiment Analysis	19
2.2 Naïve Bayes Algorithm	23
2.2.1 Overview of Naïve Bayes Algorithm	23
2.2.2 Application of Naïve Bayes Algorithm in Sentiment Analysis	24
2.2.3 Related Works using Naïve Bayes Algorithm in Sentiment Analysis	26
2.3 Marital Issues and Public Perceptions	34
2.3.1 Overview of Marital Issues	34
2.3.2 Public Perception Regarding Marital Issues	34
2.3.3 Factors Affecting Public Perception Regarding Marital Issues	36
2.3.4 Implications of Public Perception Regarding Marital Issues	38
2.4 Similar Application	40
2.5 Implication Of Literature Review	45
2.6 Conclusion	46
<b>CHAPTER 3: METHODOLOGY</b>	<b>47</b>
3.1 Overview of Research Framework Methodology	47
3.2 Preliminary Study	51
3.2.1 Problem Statement Identification	51
3.2.2 Knowledge Acquisition	52
3.3 Data Collection and Preparation	53
3.3.1 Data Collection	53

	3.3.2 Data Preprocessing	54
3.4	Design	56
	3.4.1 Design Prototype	56
3.5	Development	63
	3.5.1 Model Training	63
	3.5.2 Development of Sentiment Analyzer	64
3.6	Test and Evaluation	65
	3.6.1 Testing	65
	3.6.1 Evaluation	65
3.7	Conclusion	68
<b>CHAPTER 4: RESULTS AND DISCUSSION</b>		<b>69</b>
4.1	Program Code	69
	4.1.1 Data Description	69
	4.1.2 Data Pre-Processing	70
	4.1.3 Feature Extraction	78
	4.1.4 Naïve Bayes Algorithm Implementation	80
	4.1.5 K-Fold Cross-Validation	82
4.2	User Interface of sentiment Analyzer Dashboard	84
4.3	Evaluation Results	87
	4.3.1 Word Cloud Visualization	87
	4.3.2 Confusion Matrices for Each Fold	90
4.4	Discussion	96
4.5	Research Summary	98
4.6	Conclusion	100
<b>CHAPTER 5: CONCLUSION</b>		<b>101</b>
5.1	Research Summary	101
5.2	Project Limitation	103
5.3	Future Recommendations	104
5.4	Conclusion	106
