ACKNOWLEDGEMENT

First and foremost, I praise to Allah the Almighty for the blessings endowed upon me and provide me perseverance and patience throughout the period of my research and the preparation of my project.

I owe many people for the help and guidance throughout this project. Deep appreciation is attended to Pn. Zaiton Shariff, the supervisor of my project, who patiently read many draft and result, and whose suggestions, and editorial expertise gave this project its present shape. For her willingness to advise, motivate, teach, her patience and her friendship, a special dept of gratitude is expressed to her. I owe her high standards lifelong obeisance.

I would like to sincere my gratitude and heartfelt thanks to my beloved parent, En Mohammad Saat b Buyong and for their understanding , support ,expectations and love in nurturing me to be who I am today. Also, to my brother and sister through their caring, motivation and understanding, they taught me to have the courage to believe in myself even more.

The final and most important acknowledgement I owed to all my friends for their idea, understanding, support and expectations throughout the study. To all lectures, thank you for the support, which has been a constant source of strength, provided useful advice and moral support to me.

May ALLAH bless us.

ABSTRACT

This paper presents a design of a website by using C# programming. C# is an object-oriented programming language that combines both the C++ and the Visual Basic programming. C# is based on C++ and it's contain are almost similar with Java. This project is to utilize IT technology such as the internet to help graduate's student to find a profession in the field of their preferences. Database is a collection of related information stored in an organized way. With the help of database system, graduate's student can send their resume direct to the company or to the career recruitment agencies for applying an interview via online. This whole process will make easier to both parties. Students and the companies can save a lot in terms of time and money.

CHAPTER 1

INTRODUCTION

1.1 Background

Nowadays, online application on website is very important as it helps us a lot in making a deal. By using internet, people can make an online applications such as money transactions, ticketing services or else. For companies or any agencies, internet is a must as they use it to advertise or to ease their daily mission.

Other than that, internet users can also applying a job online. There are many website that provide such services such as jobstreet.com, jobsdb.com, elx.com etc. People who hunting for a job tends to use this service as they can reduce the cost of time and money.
