**STUDY ON COCRYSTAL FORMATION OF
IBUPROFEN AND GLUTARIC ACID VIA SLOW
COOLING TECHNIQUE**

NORADILA BT MOHAMED HANAPI

Thesis submitted in fulfillment of the requirements for the degree of

BACHELOR OF ENGINEERING CHEMICAL AND BIOPROCESS

Faculty of Chemical Engineering

July 2017

ABSTRACT

Ibuprofen is non-steroidal anti-inflammatory drug (NSAID) that used to treat pain or inflammation and to reduce fever. It is fall under Biopharmaceutical Classification System (BCS) Class II which has low solubility but high permeability. In order to improve the bioavailability of ibuprofen, an engineering approach has been done. For that purpose, an engineering crystal approach is done by preparing the co-crystal of ibuprofen and co-former such as glutaric acid to help in improving drug solubility. The method used to prepare the co-crystal is slow cooling technique. Using this technique, there are several samples of ibuprofen-glutaric acid that successfully to perform co-crystal. The successful samples were characterized using Fourier Transform Infrared Spectroscopy (FTIR), Differential Scanning Calorimetry (DSC) and optical microscope in order to confirm their morphology and purity. The findings from the study shows that the result of FTIR shows that there is new bond formed from the interaction of ibuprofen and glutaric acid. The result from DSC showing that there is formation of new melting point in between pure component used in this experiment. Lastly, the optical microscope had successfully identify the morphology that revealed by the co-crystals.

ACKNOWLEDGEMENT

In the name of Allah, Most Gracious, Most Merciful.

First I would like to express my sincere appreciation to my supervisor Encik Muhamad Fitri Bin Othman for continuous support and guidance throughout my research project. Your profound knowledge, creativeness, enthusiasm, patience, encouragement give me great help to do my research. Special thanks to the entire cocrystallization communities within faculty that comprises of Chief Department, Dr Nornizar Anuar, Dr Siti Nurul 'Ain Yusop, fellow postgraduates and undergraduates friends that always be there for guidance that push the best out of me. Without them, this research project would not have been the same as presented here.

I am very grateful to all technicians in the Faculty of Chemical Engineering who provide me technical support and equipment support for the project sake.

Finally, I wish to thank my beloved parents, my dearest sisters and brother for their endless love, care and encouraging me to fulfill my dream.

LIST OF FIGURES

FIGURE	TITLE	PAGE
2.1.2	The reaction of host-guest complexes that formed from crown ethers and ions of alkaline metals.	9
2.1.2a	The molecular recognition using hydrogen bonds.	10
2.1.2b	Example of supramolecular synthons.	11
3.2.1	X-ray Powder Diffraction	25
3.2.2	DSC 820 Mettler Toledo	26
3.2.3	FTIR from Perkin Elmer	27
3.2.4	Meiji Techno 1559 Optical Microscope.	27
4.2.1	Infrared spectrum of pure Ibuprofen, pure Glutaric Acid and cocrystals in Ethanol solvent	30
4.2.1	Infrared spectrum of pure Ibuprofen, pure Glutaric Acid and cocrystals in Propanol solvent	32
4.3 (a)	DSC analysis of pure Ibuprofen, pure Glutaric Acid and cocrystals in Ethanol solvent	34
4.3 (b)	DSC analysis of pure Ibuprofen, pure Glutaric Acid and cocrystals in Propanol solvent	34
4.4 (a)	XPRD analysis of pure component and cocrystals in Ethanol solvent	36
4.4 (b)	XPRD analysis of pure component and cocrystals in Propanol solvent	37
4.5.1 (a) (b)	Morphology of (a) Ibuprofen and (b): Morphology of Glutaric Acid	39
4.5.2	Morphology of cocrystals in ethanol solvent	39
4.5.3	Morphology of cocrystals in propanol solvent	40

CHAPTER 1

INTRODUCTION TO CO-CRYSTAL

1.1 RESEARCH BACKGROUND

The definition of term "cocrystal" is a subject of disagreement. This term has been debated in crystallography field. The simplest meaning of cocrystal can be define as a crystalline structure that made up of two or more components in a definite stoichiometric ratio, where the components may be atoms, ions or molecules. However, there is more inclusive meaning for cocrystal which is it composes of two or more components that form a unique crystalline structure having unique properties.(Wikipedia, n.d)

The discovery of cocrystal happened in 1844 by Friedrich Wohler. He was the person who studied the first reported cocrystal, quinhedrone. Quinhedrone is a type of cocrystal of quinone or hydroquinone. Archaically, it is known as quinol. From his studied, he has found that the material that made up the cocrystal was made up of 1:1 molar combination of the components. Then, this cocrystal of quinhedrone is continues analyzed by numerous groups over the next decade. From this research, several cocrystals were made using halogenated quinones. In 1990's, the cocrystals then are continued to be discovered. There is some discover the cocrystals by chance and there are also using screening techniques. The engineering of cocrystals with desired physical and chemical properties is
