Abstract

Ensuring the spirit of *gotong-royong* among public by our government is important due to the era of globalization. This is because the aim and goal of this spirit of *gotong-royong* is to maintain and retain the peace and harmonies of the nation. In Malaysia we have various races like Malay, Chinese and Indian that has their own belief that most of this religious are encouraging all the society live in the spirit of tolerance and *gotong-royong* attitude. Therefore this research is focuses the measuring on factor that encourage spirit of *gotong-royong* whether it come from environment, social status, education, demographic, types of *gotong-royong* and togetherness. This research was carry carried out at Melaka Tengah area which 150 questionnaires using multistage cluster sampling distributed to society at Kampung Bachang and Taman Kerjasama. We choose two different locations because we want to know how far the spirit of *gotong-royong* between Kampung and Taman and also the difference perception on dealing with spirit of *gotong-royong*. From our finding *gotong-royong* spirit still exist in both location which is they agree that *gotong-royong* will give benefit for themselves. In addition, most society also agreed that *gotong-royong* participation not need to pay on their contribution but it can be use if society is given recognition for their involvement. In conjunction on that society also strongly support to the implementation of "Hari *Gotong- Royong* se-Malaysia" to bring the integration of unity.
