**A LITERATURE REVIEW ON THE POSSIBLE SOURCES
FOR PRODUCTION OF FATTY ACIDS**

MUHAMAD ZULIKRAM BIN ABDUL HALIM

This report is submitted in partial fulfilment of the requirements
needed for the award of **Bachelor in Chemical Engineering (Hons)**

ABSTRACT

The main purpose of this research review is to find out the possible sources for production of Fatty acids (FA). There is a lot of sources of Fatty Acid which is come from animal origin, plant origin and also can be produce from the *synthesis of bacteria* from spent mushroom compost. This research just only focused only one source from each origin that may be discussed in this review of production FA. Fatty acids is a carboxylic acid which is consisting of hydrocarbon chain and also consist a terminal carboxyl group (-COOH). Fatty acids also brought high potential industrial demand in many sector such as industry foods, agriculture, pharmaceutical, cosmetic, textile, and many more industries related to fatty acids. Therefore, fatty acids production would be review in Malaysia scenario for the last few years (2013, 2014 and 2015) regarding to their local consumptions, import and export. Production of Fatty acid in Malaysia could be achieve by review on the commodity of tall oil Fatty Acids. This tall oil fatty acids commodity will show the trend of the production fatty acids at the local region in Malaysia, import and export. So, it is suggested to get a data on the last 3 years with regards to production for import and export quantity. Fatty acids also have beneficial value towards human health that is come from the essential fatty acids linolenic and linoleic fatty acids which may be discussed further in this review.

ACKNOWLEDGEMENT

First and foremost, I am praise and very grateful to The Almighty God for giving the opportunity to embark on my degree and for completing this long journey successfully. My special gratitude goes to my parents for their prayers, encouragement, support and this thesis is dedicated to them for the vision and determination to educate me and this research project will be the achievement and symbol for ends of my degree.

A special thanks and appreciation to my supervisor Madam Suhaiza Hanim Hanipah for the consistently giving guidance, encouragement and continued support my research team upon completing this study/research to success. Also not forgotten, my ex-supervisor Prof Mayda Dr. Md. Amin Hashim for their kindness to provide a lot of information, advice and guidelines as both of them were contribute a lot of information and time for me especially for complete my research project. My next appreciation with special thanks goes to Madam Siti Fatma Abd Karim and Dr. Siti Noor Suzila Maqsood ul Haque which is coordinator of research project 1 and 2 respectively.

Finally I like to express my deep appreciation to my families and friends that always been very supportive and helpful and also for those that involved directly or indirectly, either in one way or other, given me in valuable help, assistance and advice in the preparation and accomplishment of this research project. My research project could not be complete without their guide and help.

TABLE OF CONTENT

CONTENT	PAGE
AUTHOR’S DECLARATION	i
SUPERVISOR’S CERTIFICATION	ii
PLAGIARISM DECLARATION	iii
ABSTRACT	iv
ACKNOWLEDGEMENT	v
LIST OF FIGURE	viii
LIST OF TABLE	ix
 CHAPTER 1: INTRODUCTION	 1
1.1 General introduction to Fatty Acids	1-2
1.2 Research Background	3-4
1.3 Objective of Study	4
1.4 Problem Statement	5
1.5 Scope of Study	5
 CHAPTER 2: LITERATURE REVIEW	 6
2.1 Fatty Acids and Health	
2.1.1 Fatty Acid play an important role to the human body	6-8
2.1.2 Linolenic and Linoleic Fatty Acids; The Special Fats.	8-9
2.2 Tall Oil Fatty Acid	
2.2.1 General to Tall Oil Fatty Acids	9-11
2.2.2 Application to Tall Oil Fatty Acids	11-12
2.2.3 Malaysia Import Statistics of Commodity Tall Oil Fatty Acids	12-15
2.2.4 Malaysia Export Statistics of Commodity Tall Oil Fatty Acids	16-18
2.3 Sources of Fatty Acid	
2.3.1 Volatile Fatty Acids from Spent Mushroom Compost	18-21
2.3.2 Fatty acids in Lard: Pig derivatives	21-24
2.3.3 Fatty acids from Coconut Oil	24-27

CHAPTER 1

INTRODUCTION

1.1 GENERAL INTRODUCTION TO FATTY ACIDS

There are three (3) types of Fatty Acids that can be probably categorized such as saturated, monounsaturated and polyunsaturated Fatty Acids. Generally, all Fatty Acids have chains of carbon (C) atoms with hydrogen (H) atoms linked to the carbon atoms. The maximum possible number of H atoms attached to every C atom is called as saturated Fatty Acids as in Figure 1(a) because it “saturated” with H atoms and single bond with C atom. Not all Fatty Acids exist as saturated form. It may exist also in unsaturated form, Figure 1(b) which is monounsaturated and polyunsaturated. The forming of unsaturated Fatty Acids happen when a pair of H atoms in the middle of the chain is missing that can led to creating a gap and then forming a double bond instead of single bond of C-H. There are few of H atoms, it is said to be “unsaturated”. Monounsaturated Fatty Acids consist only one double bond whereas polyunsaturated consist more than one double bond.
