

“ACTION FOR NATURE!”

Biodiversity is the foundation that supports all life on land and below water. It affects every aspect of human health, providing clean air and water, nutritious foods, scientific understanding and medicine sources, natural disease resistance, and climate change mitigation. Changing, or removing one

element of this web affects the entire life system and can produce negative consequences.

Human actions, including deforestation, encroachment on wildlife habitats, intensified agriculture, and acceleration of climate

WORLD ENVIRONMENT DAY

**World Environment Day hosted by Colombia on June 5th 2020.
The theme is “Biodiversity– a concern that is both urgent and existential”**

change, have pushed nature beyond its limit.

Biodiversity involves eight million plant and animal species, the ecosystems that house them, and the genetic diversity among them.
