8th MyPSA National Pharmacy Research Competition (NPRC) 2025

The 8th MyPSA National Pharmacy Research Competition (NPRC) 2025 served as an intellectually enriching platform, aligning with the Faculty of Pharmacy's commitment to nurturing a strong research culture, enhancing academic excellence, and preparing students for real-world scientific discourse. This national-level event aimed to encourage pharmacy students to engage in research, sharpen their critical thinking, and enhance their communication and presentation skills within a professional environment.

The event held at MAHSA University, Bandar Saujana Putra, from 3 to 4 May 2025, was organised by the MAHSA University Pharmacy Students' Society (MuPSS) in collaboration with the Malaysian Pharmacy Students' Association (MyPSA). The competition brought together pharmacy students from institutions across Malaysia to present, share, and celebrate innovations and scientific inquiry in the field of pharmacy and pharmaceutical sciences.

We are proud to highlight the participation of two final-year students from Rx20, namely Aliff Zulkarnain bin Zani and Naim Haafizal bin Sabaruddin, who represented UiTM in Category B, focusing on research in Pharmacology, Pharmaceutical Chemistry, Pharmaceutics, and Pharmaceutical Technology. This category is exclusively open to final-year pharmacy students. Both participants presented their research in the poster presentation during the preliminary rounds and advanced to deliver oral slide presentations in the final round. Their involvement was guided and supported by their advisor, Dr. Siti Nooraishah binti Hussin, whose mentorship was instrumental in preparing them for the competition.

In conclusion, participation in NPRC 2025 highlighted UiTM's ongoing efforts to produce research-driven graduates who are equipped for professional excellence. Beyond serving as a competitive arena, the event also provided a platform for networking, collaboration, and the exchange of innovative ideas, all of which are crucial to advancing the field of pharmacy.
