ACKNOWLEDGEMENT

First and foremost, we would like to praise and thankful to Allah S.W.T for gaining us the strength and patience in competing this project paper.

Our unlimited appreciation goes to our beloved parents for their love, encouragement and support at any time. They are our inspiration and motivation, now and always.

Our appreciations and gratitude is also acknowledged to our beloved sister and brother, for their encouragement, humor and support

We are also like to extend our gratitude to our entire fellow classmate DBS06 that have been giving us a lot of support and being there when we needed them throughout the semester.

Our gratitude are also goes to all our best friends that always be there and contribute us invaluable idea and suggestion, which has been very contribute our invaluable idea and suggestion, which has been very inspirational to me, thank you friends

We like to thank for cooperation to respondent during our research project. Without their participation, this research will not be done.

Finally, we also like to express our profound thank you to the advisor and the examiner of our project Madam Sharifah Nurafizah

ABSTRACT

This research is focusing on the study on internet wireless connection that affect the academic and physically performance. It is populated at UITM Sabah for 100 students. UITM as one of the University that compete globally with other University, provide wireless to its students in order to them more knowledgeable and high quality. 24 hours of connection internet and limited opening of certain website mostly affect the student performance. Wrong used by student tend give either negative or positive effect towards their academic and social interactions.

Our main objectives are to identify the advantages and disadvantages wireless connection towards student, to analyze the effect of limited website on information among student, to determine of the wireless connection to the student daily performance in class.

For our variables involved, such in this study, internet connection is the dependent variable that depends on independent variables which include academic performances, cyber bulling and relation with others that includes other students and outsiders. This is because, internet wireless connection is influenced by all factors that included in independent variables which shown at the above framework.

With this research it will help to gain information about problems due to low wireless connection and limited sites that tend to affect many students in their academic.
