## ABSTRACT

Corrosion is a critical issue in many industries which is particularly affecting steel structures exposed to near neutral environments. This study investigates the potential of biosurfactants which particularly sodium alginate as a corrosion inhibitor for steel in near neutral environments. The challenge in maintaining the SA adsorptivity on the metal surface in near neutral medium induced the investigation on using a good concentration. The focus of this study is to evaluate the corrosion inhibition efficiency of mild steel in 0.6 M and 2 M of NaCl solutions with varying concentrations of SA which is 100 ppm to 500 ppm. The study includes corrosion inhibition performance was assessed using the immersion test (weight loss method) for 3 hours. The functional group identification via Fourier Transform Infrared Spectroscopy (FTIR) and surface morphology analysis using optical microscopy are also has been investigated. The results demonstrate that SA forms a protective layer on the steel surface and reducing corrosion rates significantly through adsorption of functional groups (-OH and -COO). It also revealed that corrosion rate (CR) without SA was 4.0175 mm/yr in 2 M NaCl and 1.016 mm/yr in 0.6 M NaCl which is both categorized as poor corrosion. The inhibition efficiency (%IE) with the addition of SA are reached up to 88.5% at 500 ppm in 2 M NaCl and 95.45% at 500 ppm in 0.6 M NaCl. Both results indicate a significant decrease in CR and effective surface protection. The optical microscope results reveal that as the concentration of SA increases, the surface roughness decreases with smoother surfaces observed at higher SA concentrations particularly at 0.5 g/L of SA. In terms of corrosion, the types of corrosion range from severe uniform and localized corrosion at higher NaCl concentrations to negligible corrosion at smoother surfaces with lower SA concentrations. The findings suggest that sodium alginate is an effective and eco-friendly alternative to inorganic corrosion inhibitors particularly in marine and industrial applications.

## TABLE OF CONTENTS

<b>TABLE OF CONTENTS</b>	<b>i</b>
<b>LIST OF TABLES</b>	<b>iv</b>
<b>LIST OF FIGURES</b>	<b>vi</b>
<b>LIST OF SYMBOLS</b>	<b>viii</b>
<b>LIST OF ABBREVIATION</b>	<b>v</b>
<b>CHAPTER 1</b>	<b>1</b>
<b>INTRODUCTION</b>	<b>1</b>
1.1 Research Background	1
1.2 Problem Statement	5
1.3 Research Questions	6
1.4 Objectives	6
1.5 Significance of Study	6
<b>CHAPTER 2</b>	<b>8</b>
<b>LITERATURE REVIEW</b>	<b>8</b>
2.1 Introduction to Corrosion	8
2.1.1 Biosurfactant	9
2.1.2 Sources of Biosurfactant	12
2.1.3 Application of Biosurfactant	13
2.2 Biosurfactant as Corrosion Inhibitor	15
2.2.1 Classification of Biosurfactant	15
2.2.2 Effectiveness and Factor Influence Biosurfactant on Corrosion protection	16
2.2.3 Biosurfactant as Corrosion Inhibitors in Near Neutral Environment	19
2.3 Sodium Alginate (SA)	21
2.3.1 Properties of Sodium Alginate	21
2.3.2 Application of Sodium Alginate in Industries	23
2.3.3 Sodium Alginate as Corrosion Inhibitors	25
2.4 Mild Steel (MS)	27
2.4.1 Properties of Mild Steel	27
2.4.2 Application of Mild Steel	28
2.4.3 Corrosion of Mild Steel	29

2.4.4 Sodium Alginate as Corrosion Inhibitor for Steel in Near Neutral Environments	31
<b>CHAPTER 3</b>	<b>33</b>
<b>METHODOLOGY</b>	<b>33</b>
3.1 Materials	33
3.1.1 Raw Materials	33
3.2 Chemicals	35
3.3 Equipment and Apparatus	36
3.4 Instrument	37
3.5 Characterization of Sodium Alginate (SA)	38
3.5.1 Fourier Transform Infrared Spectroscopy (FTIR)	38
3.6 Corrosion Test	38
3.6.1 Preparation of Mild Steel Specimen	38
3.6.2 Preparation of Corrosive Medium	39
3.6.3. Preparation of Corrosion Inhibitor (CI)	39
3.7 Immersion Test (Weight Loss Method)	40
3.8 Summary of Parameters	43
3.9. Flow Chart of Immersion Test	44
3.10 Surface Analysis by Optical Microscope	45
3.11 Experimental Design/Flow Chart	46
<b>CHAPTER 4</b>	<b>47</b>
<b>RESULTS AND DISCUSSION</b>	<b>47</b>
4.1 Synthesis and Characterization of Sodium Alginate by FTIR	47
4.2 Analysis on Preparation of Corrosive Medium and Corrosion Inhibitor	50
4.2.1 Near Neutral Solution as Corrosive Medium	50
4.2.2 Sodium Alginate as Corrosion Inhibitor	52
4.3 Influence NaCl Concentration on The Rate of Corrosion of Mild Steel	54
4.4 Weight Loss Measurement Results and Inhibition Efficiency	56
4.5 Corrosion Resistance Rate of Mild Steel after Immersion Test	59
4.6 Surface Morphology Analysis by Optical Microscope (OM)	62
<b>CHAPTER 5</b>	<b>68</b>
<b>CONCLUSION AND RECOMMENDATION</b>	<b>68</b>
