# SOUTH EAST ASIA UITM & DIVERSATEK MOTILITY WORKSHOP 2022

**DR RAFIZ ABDUL RANI**  
**DEPARTMENT OF MEDICINE**

The inaugural South East Asia UiTM & Diversatek Motility Workshop was successfully conducted on the 14 and 15 July 2022. Our first international workshop sees participants from Vietnam, Philippines, Sri Lanka, and Mongolia and our local participants converging for a two-day course in consolidating the fundamentals and updates on GI Motility. The workshop was designed to suit beginners and those seeking updated knowledge in oesophageal motility testing. Particular to the course were the live demo cases of manometry and pH Impedance, as well as the hands-on tutorials on the zVu software, utilizing the latest Chicago 4.0 Classification. Highlights were the live case sessions and live analysis and interpretation of motility cases

Among the lectures were oesophageal anatomy and function, the Chicago classification, overview of motility disorders, reflux analysis, and GERD diagnosis and management which provides an insight into the whole spectrum of oesophageal motility disorders.

The event, which was endorsed by the Malaysian Society of Gastroenterology and Hepatology (MSGH), was honored by the presence of MSGH President himself, Y.Bhg Prof Dr. Lee Yeong Yeh, who was the guest of honor and eminent speaker, being a well-known and respected expert in the international motility fraternity.

Hands-on zVu Advance Diagnostic GI software was conducted at the computer lab of Perpustakaan Tun Abdul Razak (PTAR) with the live cases being held at the simulation ward. Participants were also brought on a tour of the Endoscopy Unit, detailing the day-to-day operations, allowing networking and sharing of future aspirations.
