*Faculty of Information Management, UiTM (Kedah Branch)*

### **ABSTRACT:**

"Gethebook" is one of technology that can help all users or patrons to reach out the materials for them. It is using QR code and smartphone. This is because nowadays all users and patrons have their own smartphone so this will make them easier to retrieve and use our "Gethebook". We are focusing this to users and patrons who do not know how to search book at the library. The first step is, users must search requested book at the OPAC then the QR code will be provided to them. Besides, this technology provides guide to help all user and patron to search their library material.

*Keyword: Technology, QR code, Using gadgets, Fast retrieval tool and Friendly User.*

---

### **Novelty & Uniqueness:**

Firstly, we create this "Gethebook" name based on the sound that the book will drop when user scan the QR code that they get from online public access catalog. The users may retrieve the materials within a short time by using the QR code that we designed. This service could guide the users to reach the material they want at the shelf in more specific and efficiency. When they use this QR code, they will know which shelves they should go to find the book. This service has never been applied and we are the pioneer in producing this service. We improvised the users will easily retrieve the materials at the right location, can be more trusted and save the time to achieve the materials that they need.

### **Potential Commercialization:**

Lecturers, students, staffs, researchers, and academic library.

---

### **Acknowledgement:**

*An appreciation to our team members for their patience and support throughout to finish and overcoming numerous obstacles in finish this project.*
