### **ABSTRACT:**

Not able to borrow books on time? Book doesn't enough? Don't worry, with Decoded, you will no longer have to go through shelves and disappointed by unavailability of the materials in the library. Combine with cloud library and QR code, simply scan it and voila; everyone able to access Decoded. Decoded is a software that provides thousands of academic material as an alternative to the library. No wait time... simply with a simple scan, you able to access electronic academic materials with ease anytime and anywhere you want available on database cloud. Through this software, the library can prolong the lifespan of the materials while also saving space for a new publication. Information will be available for the student without the hassle and saving so much time.

*Keyword: Cloud Library/QR Code/ Easy Access/ Digital Content*

---

### **Novelty & Uniqueness:**

Easy to use: Can be used by everyone.

Saving Time: Doesn't needs to search through shelves.

Availability: Scan QR code, and choose from thousands of material in the cloud.

Customizable: with columns and built-in metadata, it is easy and fast to look up.

### **Potential Commercialization:**

To be used as an alternative for the library or work side by side with each other to be more sustainable for the future and ease users experience in retrieving digital materials.

---

### **Acknowledgement:**

*This idea came from our experience in UiTM Kedah and feedback from our friends and users in the Library. By using available and legal software and service (google drive, Calibre and lecturer experience etc), we manage to come out with this project. We hope through this simple idea, the library will become more accessible to users and customer and encourage others to join us in making the library relevant for many more years.*
