*Faculty of Information Management, UiTM (Kedah Branch)*

Nurani Abdullah

*Faculty of Information Management, UiTM (Puncak Perdana Campus)*

### **ABSTRACT:**

QLib is a simple yet useful technology to be applied on library materials to ease the process of gaining a library material's information with minimum effort with high guarantee of success in information retrievals for the advanced community.

*Keywords: QR code, books, content, information, library technology.*

---

### **Novelty & Uniqueness:**

This idea is unique as it did not seem out of place from the urban and modern users' demands where modern technology is to be made use in increasing time management efficiency to retrieve the right information easily

### **Potential Commercialization:**

Commercialization for all types of libraries can be done and installed easily as it does not need any heavy machinery to equip these QLib codes. QLib codes can be generated easily with a QR code application with the material's necessary information into a printed form to be attached onto the material's surface. This product does not require high understanding in operating technology application.

---

### **Acknowledgement:**

*The need for technology in library as a crucial factor to keep library standards to stay relevant as information provider alongside the rapid changes of technology among the community, avoiding the label of library as an 'outdated' information agency QLib (Quick Library)*
