

SUBMISSION FOR EVALUATION

FINAL YEAR PROJECT 2

GREEN SYNTHESIS AND CHARACTERIZATION OF SILVER
NANOPARTICLES USING LABISIA PUMILA EXTRACT WITH DPPH
ANTIOXIDANT ASSAY

Name : MUHAMMAD ADAM HAKIMI BIN ZAINAL

Student ID : 2022898842

Program : BACHELOR OF SCIENCE (HONS) CHEMISTRY WITH
MANAGEMENT

Course code : AS222

Mobile Phone :

E-mail : 2022898842@student.uitm.edu.my

Approval by Main Supervisor :

I certify that the work conducted by the above student is completed and approve this report to be submitted for evaluation.

Supervisor's name : DR JEYASHELLY A/P ANDAS

Date : 15/2/2026

Turnitin Similarity % : 17%

Signature :

ABSTRACT

GREEN SYNTHESIS AND CHARACTERIZATION OF SILVER NANOPARTICLES USING *LABISIA PUMILA* EXTRACT WITH DPPH ANTIOXIDANT ASSAY

This study investigated the green synthesis of silver nanoparticles (AgNPs) using *labisia pumila* extract as a natural reducing and stabilizing agent and evaluated their physicochemical characteristics and antioxidant activity. The synthesis process was carried out using an eco-friendly approach without the use of hazardous chemicals. The formation of AgNPs was initially confirmed by a visible colour change from pale yellow to dark brown, indicating the reduction of Ag^+ ions to metallic Ag^0 . The synthesized AgNPs with different silver loadings (0.5%, 1.0%, 2.0%, and 5.0%) were characterized using Inductively Coupled Plasma Optical Emission Spectroscopy (ICP-OES), Fourier-Transform Infrared Spectroscopy (FTIR), Field Emission Scanning Electron Microscopy (FESEM), and X-Ray Diffraction (XRD). FTIR analysis confirmed the involvement of phenolic, hydroxyl, and carbonyl functional groups from *labisia pumila* in the reduction and stabilization of AgNPs. FESEM results showed that the 2.0% Ag loading produced well-distributed nanoparticles with minimal agglomeration compared to lower and higher Ag concentrations. XRD analysis revealed the crystalline nature of the AgNPs with a face-centered cubic structure. The average crystallite size estimated using the Scherrer equation ranged from approximately 9–30 nm, increasing with silver loading. Among all formulations, the 2.0% Ag sample exhibited optimal crystallinity with controlled crystallite growth. The antioxidant activity of the optimized 2.0% AgNPs was evaluated using the DPPH free radical scavenging assay. The results showed significant antioxidant activity across all tested concentrations, indicating strong free radical scavenging potential. Overall, the findings demonstrate that *Labisia pumila*-mediated AgNPs, particularly at 2.0% Ag loading, possess favorable structural properties and antioxidant activity, highlighting their potential for future biomedical applications of antioxidant-based therapies.

TABLE OF CONTENTS

	Page
ABSTRACT	i
ABSTRAK	ii
ACKNOWLEDGEMENT	iii
TABLE OF CONTENTS	iv
LIST OF TABLES	vi
LIST OF FIGURES	vii
LIST OF SYMBOLS	viii
LIST OF ABBREVIATION	ix
CHAPTER 1	
INTRODUCTION	
1.1 Research Background	1
1.2 Problem Statement	3
1.3 Research Question	3
1.4 Objectives	4
1.5 Significance of study	4
CHAPTER 2 LITERATURE REVIEW	
2.1 Kacip Fatimah	5
2.2 Silver (Ag)	6
2.2.1 Silver Nitrate (AgNO ₃)	7
2.2.2 Nanoparticles (NPs)	7
2.2.3 Silver Nanoparticles (AgNPs)	8
2.3 Method to synthesis AgNPs	10
2.3.1 Conventional Methods	10
2.3.2 Other Method of Synthesizing AgNPs	11
2.3.3 Green Synthesis of AgNPs	12
2.4 Potential Application of AgNPs in Drug Delivery for Wound Healing	15
CHAPTER 3 METHODOLOGY	
3.1 Raw Materials and Chemicals	17
3.2 Methods	17
3.2.1 Preparation of <i>Labisia Pumila</i> Extract	17
3.2.2 Preparation of Blank Sample	18
3.2.3 Preparation of AgNO ₃	19
3.2.4 Preparation of AgNPs Synthesis	19
3.3 Sample Characterization	19
