1.0 ACKNOWLEDGEMENTS

Firstly, we would like to thank God for giving us strength and health to finish our internship successfully. Next, we would like to express the deepest appreciation to our lecturer, Mr. Muhamad Syukrie Bin Haji Abu Talip for giving us a chance to undergo our internship for six weeks to improve our performance and gain more experiences.

Moreover, a big thanks to the manager of RRIM Similajau Station, Mr. Salihin Bin Sekot for giving us a chance to broaden our horizon on rubbers at Malaysian Rubber Board, RRIM Similajau, Bintulu, Sarawak.

We would also like to thank our Research Assistants, Mr. Thomas anak Ninggang, Mr. Mohd Ashraf bin Ramli and Mr. Giring ak January Enju for their guidance and their willingness to share their experiences along our industrial training. Our appreciation goes to the other supporting staffs as well.

Last but not least, we would express our gratitude to our parents for their endless support. Be it mentally or morally. Also, we would like to thanks to Malaysian Rubber Board generally and Research Station RRIM Similajau, Bintulu personally and we will never forget all of you with our moment at this agency. Thank you.

1.2 ORGANISATION BACKGROUND

Malaysian Rubber Board (MRB)

The Malaysian Rubber Board (MRB) is the custodian of the rubber industry in Malaysia. It was established on 1st January 1998, it has under its fold there well establish agencies (RRIM, MRRDB and MRELB), which are now merged into one, which have contributed significantly to the development of the rubber industry for the last 78 years. The R&D excellence in Natural Rubber, accomplished by the Rubber Research Institute of Malaysia (RRIM), has an impact on the Malaysian NR producing countries.

The primary objectives of MRB is to assist in the development and modernization of Malaysian rubber industry in all aspects from cultivation of the rubber tree, the extraction and processing of its raw rubber, the manufacture of rubber products and the marketing of rubber and its products.

Mission

To enhance the competitiveness and viability of the Malaysian rubber industries in the global environment through focused research and development, effective transfer of technology and quality support services.

Vision

To be a leading organization in all area of the rubber industry for the benefits of society.

10.0 CONCLUSIONS

Industrial training is the place where we can experience new things by doing practical in the field. The practical was based on what we had studied in class. Before this industrial training, we only studied theoretically. But once we came to RRIM Similajau, we gained more insights.

Besides that, we also can witness events such as pest and disease attacks, fertiliser application, weeding and also learned ways to prepare planting materials.

Industrial training gives us a lot of benefit by improving our soft skills in working compound. Besides, through this training, we can improve our communication skills with one another and learn how to cooperate in a team. We also have the opportunity to learn new things, gain knowledge, experience and management skills in rubber plantation. Theoretically, there are things we have learned during lecture but through this training we can improve our understanding about the existing knowledge.

As a conclusion, industrial training is an effective way to test and also improve the existing knowledge of the students themselves. This kind of training should be done more often because it gives a better impact to students in terms of their skills and experiences. As we all know, skill and experience are important things to find a job in the future.
